**SUPPLEMENT TO THE SUMMARY AND STATUTORY  
PROSPECTUSES OF EACH OF THE PORTFOLIOS  
LISTED ABOVE**

The purpose of this Supplement to the Summary and Statutory Prospectuses dated February 28, 2023, of the portfolios listed above (collectively, the "Portfolios"), each a series of DFA Investment Dimensions Group Inc., Dimensional Investment Group Inc. or Dimensional ETF Trust, is to replace (or add) the footnote to the "Annual Returns" table under the "Performance" section regarding each Portfolio's benchmark(s) with the following:

\* ICE BofA index data copyright 2022 ICE Data Indices, LLC. Prior to July 1, 2022, index returns reflect no deduction for transaction costs. Effective July 1, 2022, index returns include transaction costs (as determined and calculated by the index provider), which may be higher or lower than the actual transaction costs incurred by the Portfolio.

*The date of this Supplement is March 6, 2023*

# Dimensional Core Fixed Income ETF

## Investment Objective

The investment objective of the Dimensional Core Fixed Income ETF (the “Core Fixed Income ETF” or “Portfolio”) is to seek to maximize total returns from the universe of eligible investments. Total return is comprised of income and capital appreciation.

## Fees and Expenses of the Portfolio

This table describes the fees and expenses you may pay if you buy, hold or sell shares of the Core Fixed Income ETF. **You may also incur usual and customary brokerage commissions when buying or selling shares of the Portfolio, which are not reflected in the table or Example that follows.**

---

**Shareholder Fees (fees paid directly from your investment): None**

**Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)\***

Management Fee	0.16%
Other Expenses	0.03%
Total Annual Fund Operating Expenses	0.19%
Fee Waiver and/or Expense Reimbursement**	0.02%
Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement	0.17%

\* The “Management Fee” and “Total Annual Fund Operating Expenses” have been adjusted to reflect the decrease in the management fee payable by the Portfolio from 0.17% to 0.16% effective as of February 28, 2023.

\*\* Dimensional Fund Advisors LP (the “Advisor”) has agreed to waive certain fees and in certain instances, assume certain expenses of the Portfolio. The Fee Waiver and Expense Assumption Agreement for the Portfolio will remain in effect through February 28, 2024, and may only be terminated by the Fund’s Board of Trustees prior to that date. The Advisor retains the right to seek reimbursement for any fees previously waived and/or expenses previously assumed up to thirty-six months after such fee waiver and/or expense assumption.

### EXAMPLE

This Example is meant to help you compare the cost of investing in the Core Fixed Income ETF with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Portfolio for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Portfolio’s operating expenses remain the same. The costs for the Portfolio reflect the net expenses of the Portfolio that result from the contractual expense waiver in the first year only. Although your actual costs may be higher or lower, based on these assumptions, your costs whether you redeem or hold your shares would be:

1 Year	3 Years	5 Years	10 Years
\$17	\$59	\$105	\$241

### PORTFOLIO TURNOVER

The Core Fixed Income ETF pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Portfolio shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Portfolio’s performance. During the period November 15,

2021 to October 31, 2022, the Portfolio's portfolio turnover rate was 75% of the average value of its investment portfolio.

## Principal Investment Strategies

The Core Fixed Income ETF will seek to achieve its investment objective through exposure to a broad portfolio of U.S. and foreign investment grade fixed income securities. The Portfolio may invest in obligations issued or guaranteed by the U.S. and foreign governments, their agencies and instrumentalities, including mortgage-backed securities, corporate debt obligations, bank obligations, commercial paper, repurchase agreements, money market funds, securities of domestic or foreign issuers denominated in U.S. dollars but not trading in the United States, and obligations of supranational organizations. The Portfolio may purchase or sell mortgage-backed securities on a delayed delivery or forward commitment basis through the "to-be-announced" (TBA) market. As a non-fundamental policy, under normal circumstances, at least 80% of the Portfolio's net assets will be invested in fixed income securities considered to be investment grade quality.

The Portfolio will be managed with a view to capturing expected credit premiums and expected term premiums. The term "expected credit premium" means the expected incremental return on investment for holding obligations considered to have greater credit risk than direct obligations of the U.S. Treasury, and "expected term premium" means the expected relative return on investment for holding securities having longer-term maturities as compared to shorter-term maturities. In managing the Portfolio, the Advisor will increase or decrease investment exposure to intermediate-term securities depending on the expected term premium and also increase or decrease investment exposure to non-government securities depending on the expected credit premium.

The Portfolio may invest in fixed income securities considered investment grade at the time of purchase (e.g., rated BBB- or above by S&P Global Ratings ("S&P") or Fitch Ratings Ltd. ("Fitch") or Baa3 or above by Moody's Investor's Service, Inc. ("Moody's")). The Portfolio may invest with an emphasis on debt securities rated in the lower half of the investment grade spectrum (e.g., rated BBB- to A+ by S&P or Fitch or Baa3 to A1 by Moody's). The Portfolio will not emphasize investments in the lower half of the investment grade spectrum, however, when the Advisor believes the expected credit premium is relatively low. The Portfolio will also invest in higher-rated debt securities. In addition, the Portfolio is authorized to invest more than 25% of its total assets in U.S. Treasury bonds, bills and notes, and obligations of federal agencies and instrumentalities.

The Portfolio primarily invests in securities that mature within twenty years from the date of settlement, but may, as in the case of mortgage-backed securities, invest in securities with longer maturities. Under normal circumstances, the Portfolio will generally maintain a weighted average duration of no more than one quarter year greater than, and no less than one year below, the weighted average duration of the Portfolio's benchmark, the Bloomberg U.S. Aggregate Bond Index, which was approximately 6.17 years as of December 31, 2022. From time to time, the Portfolio may deviate from this duration range when the Advisor determines it to be appropriate under the circumstances. Duration is a measure of the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates.

The Portfolio's investments may include securities denominated in foreign currencies. The Portfolio intends to hedge foreign currency exposure to attempt to protect against uncertainty in the level of future foreign currency rates. The Portfolio may enter into foreign currency forward contracts to hedge against fluctuations in currency exchange rates or to transfer balances from one currency to another. The Portfolio also may enter into credit default swaps on issuers or indices to buy or sell credit protection to hedge its credit exposure; gain market or issuer exposure without owning the underlying securities; or increase the Portfolio's total return. The Portfolio may purchase or sell futures contracts and options on futures contracts, to hedge its currency exposure or to hedge its interest rate exposure or for non-hedging purposes, such as a substitute for direct investment or to increase or decrease market exposure based on actual or expected cash inflows to or outflows from the Portfolio.

The Portfolio may lend its portfolio securities to generate additional income.

The Portfolio is an actively managed exchange-traded fund and does not seek to replicate the performance of a specific index and may have a higher degree of portfolio turnover than such index funds.

## Principal Risks

Because the value of your investment in the Core Fixed Income ETF will fluctuate, there is the risk that you will lose money. An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following is a description of principal risks of investing in the Portfolio.

**Market Risk:** Even a long-term investment approach cannot guarantee a profit. Economic, political, and issuer-specific events will cause the value of securities, and the Portfolio that owns them, to rise or fall.

**Interest Rate Risk:** Fixed income securities are subject to interest rate risk because the prices of fixed income securities tend to move in the opposite direction of interest rates. When interest rates rise, fixed income security prices fall. During periods of very low or negative interest rates, the Portfolio may be subject to a greater risk of rising interest rates. When interest rates fall, fixed income security prices rise. In general, fixed income securities with longer maturities are more sensitive to changes in interest rates.

**Credit Risk:** Credit risk is the risk that the issuer of a security may be unable to make interest payments and/or repay principal when due. A downgrade to an issuer's credit rating or a perceived change in an issuer's financial strength may affect a security's value, and thus, impact the Portfolio's performance. Government agency obligations have different levels of credit support and, therefore, different degrees of credit risk. Securities issued by agencies and instrumentalities of the U.S. government that are supported by the full faith and credit of the United States, such as the Federal Housing Administration and Ginnie Mae, present little credit risk. Other securities issued by agencies and instrumentalities sponsored by the U.S. government, that are supported only by the issuer's right to borrow from the U.S. Treasury, subject to certain limitations, and securities issued by agencies and instrumentalities sponsored by the U.S. government that are sponsored by the credit of the issuing agencies, such as Freddie Mac and Fannie Mae, are subject to a greater degree of credit risk. U.S. government agency securities issued or guaranteed by the credit of the agency may still involve a risk of nonpayment of principal and/or interest.

**Income Risk:** Income risk is the risk that falling interest rates will cause the Portfolio's income to decline because, among other reasons, the proceeds from maturing short-term securities in its portfolio may be reinvested in lower-yielding securities.

**Call Risk:** Call risk is the risk that during periods of falling interest rates, an issuer will call or repay a higher-yielding fixed income security before its maturity date, forcing the Portfolio to reinvest in fixed income securities with lower interest rates than the original obligations.

**Foreign Securities and Currencies Risk:** Foreign securities prices may decline or fluctuate because of: (a) economic or political actions of foreign governments, and/or (b) less regulated or liquid securities markets. Investors holding these securities may also be exposed to foreign currency risk (the possibility that foreign currency will fluctuate in value against the U.S. dollar or that a foreign government will convert, or be forced to convert, its currency to another currency, changing its value against the U.S. dollar). The Portfolio hedges foreign currency risk.

**Foreign Government Debt Risk:** The risk that: (a) the governmental entity that controls the repayment of government debt may not be willing or able to repay the principal and/or to pay the interest when it becomes due, due to factors such as political considerations, the relative size of the governmental entity's debt position in relation to the economy, cash flow problems, insufficient foreign currency reserves, the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies, and/or other national economic factors; (b) governments may default on their debt securities, which may require holders of such securities to participate in debt rescheduling; and (c) there is no legal or bankruptcy process by which defaulted government debt may be collected in whole or in part.

**Mortgage-Backed Securities Risk:** Mortgage-backed securities represent interests in “pools” of mortgages and often involve risks that are different from or potentially more significant than risks associated with other types of debt instruments. Mortgage securities differ from typical debt securities in that principal is not paid back at maturity, but rather periodically over the life of the security. The Portfolio may receive unscheduled payments of principal due to voluntary prepayments, refinancings or foreclosures on the underlying mortgage loans. When interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the returns of the Portfolio because it may have to reinvest that money at the lower prevailing interest rates. As a result, mortgage securities may be less effective than some other types of debt securities as a means of securing long-term interest rates and may have less potential for capital appreciation during periods of falling interest rates. Conversely, in a period of rising interest rates, the Portfolio may exhibit additional volatility since rising interest rates tend to extend the duration of fixed rate mortgage-related securities, making them more sensitive to changes in interest rates. As interest rates rise mortgage borrowers are less likely to exercise prepayment options, which may reduce the value of these securities and potentially cause the Portfolio to lose money. This is known as extension risk.

**Derivatives Risk:** Derivatives are instruments, such as swaps, futures, and options thereon, and foreign currency forward contracts, whose value is derived from that of other assets, rates or indices. Derivatives can be used for hedging (attempting to reduce risk by offsetting one investment position with another) or non-hedging purposes. Hedging with derivatives may increase expenses, and there is no guarantee that a hedging strategy will work. In regard to currency hedging, it is generally not possible to precisely match the foreign currency exposure of such foreign currency forward contracts to the value of the securities involved due to fluctuations in the market values of such securities and cash flows into and out of the Portfolio between the date a foreign currency forward contract is entered into and the date it expires. While hedging can reduce or eliminate losses, it can also reduce or eliminate gains or cause losses if the market moves in a manner different from that anticipated by the Portfolio or if the cost of the derivative outweighs the benefit of the hedge. The use of derivatives for non-hedging purposes may be considered to carry more risk than other types of investments. When the Portfolio uses derivatives, the Portfolio will be directly exposed to the risks of those derivatives. Derivative instruments are subject to a number of risks including counterparty, settlement, liquidity, interest rate, market, credit, and management risks, as well as the risk of improper valuation. Changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, and the Portfolio could lose more than the principal amount invested. Additional risks are associated with the use of swaps including counterparty and credit risk (the risk that the other party to a swap agreement will not fulfill its contractual obligations, whether because of bankruptcy or other default) and liquidity risk (the possible lack of a secondary market for the swap agreement). Credit risk will increase when the Portfolio is the seller of swaps and counterparty risk will increase when the Portfolio is a buyer of swaps. In addition, where the Portfolio is the seller of swaps, it may be required to liquidate portfolio securities at inopportune times in order to meet payment obligations. Swaps may be illiquid or difficult to value.

**Liquidity Risk:** Liquidity risk exists when particular portfolio investments are difficult to purchase or sell. To the extent that the Portfolio holds illiquid investments, the Portfolio’s performance may be reduced due to an inability to sell the investments at opportune prices or times. Liquid portfolio investments may become illiquid or less liquid after purchase by the Portfolio due to low trading volume, adverse investor perceptions and/or other market developments. Liquidity risk includes the risk that the Portfolio will experience significant net redemptions at a time when it cannot find willing buyers for its portfolio securities or can only sell its portfolio securities at a material loss or at increased costs. Liquidity risk can be more pronounced in periods of market turmoil or in situations where ownership of shares of the Portfolio are concentrated in one or a few investors.

**Market Trading Risk:** Active trading markets for the Portfolio’s shares may not be developed or maintained by market makers or authorized participants. Authorized participants are not obligated to make a market in the Portfolio’s shares or to submit purchase or redemption orders for creation units. Trading in shares on an exchange may be halted in certain circumstances. There can be no assurance that the requirements of the listing exchange necessary to maintain the listing of the Portfolio will continue to be met.

**Premium/Discount Risk:** The net asset value (“NAV”) of the Portfolio and the value of your investment may fluctuate. Disruptions to creations and redemptions or the market price of the Portfolio’s holdings, the existence of extreme market volatility or potential lack of an active trading market for shares may widen bid-ask spreads and result in shares trading at a significant premium or discount to NAV. If a shareholder purchases shares at a

time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

**International Closed Market Trading Risk:** To the extent that the underlying securities held by the Portfolio trade on an exchange that is closed when the securities exchange on which the Portfolio shares list and trade is open, there may be market uncertainty about the stale security pricing (i.e., the last quote from its closed foreign market) resulting in premiums or discounts to NAV that may be greater than those experienced by other ETFs.

**Securities Lending Risk:** Securities lending involves the risk that the borrower may fail to return the securities in a timely manner or at all. As a result, the Portfolio may lose money and there may be a delay in recovering the loaned securities. The Portfolio could also lose money if it does not recover the securities and/or the value of the collateral falls, including the value of investments made with cash collateral. Securities lending also may have certain adverse tax consequences.

**Operational Risk:** Operational risks include human error, changes in personnel, system changes, faults in communication, and failures in systems, technology, or processes. Various operational events or circumstances are outside the Advisor's control, including instances at third parties. The Portfolio and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

**Cyber Security Risk:** The Portfolio's and its service providers' use of internet, technology and information systems may expose the Portfolio to potential risks linked to cyber security breaches of those technological or information systems. Cyber security breaches, amongst other things, could allow an unauthorized party to gain access to proprietary information, customer data, or fund assets, or cause the Portfolio and/or its service providers to suffer data corruption or lose operational functionality.

**Large Shareholder Risk:** Certain shareholders, including other funds or accounts advised by the Advisor, may from time to time own a substantial amount of the Portfolio's shares. In addition, a third party investor, the Advisor, an authorized participant, a lead market maker, or another entity may invest in the Portfolio and hold its investment for a limited period of time solely to facilitate commencement of the Portfolio or to facilitate the Portfolio achieving a specified size or scale. There can be no assurance that any large shareholder would not redeem its investment, that the size of the Portfolio would be maintained at such levels or that the Portfolio would continue to meet applicable listing requirements. Redemptions by large shareholders could have a significant negative impact on the Portfolio. In addition, transactions by large shareholders may account for a large percentage of the trading volume on the listing exchange and may, therefore, have a material upward or downward effect on the market price of the shares.

## Performance

The bar chart and table immediately following illustrate the variability of the Core Fixed Income ETF's returns and are meant to provide some indication of the risks of investing in the Portfolio. The bar chart shows the changes in the Portfolio's performance from year to year. The table illustrates how annualized one year and since inception returns, both before and after taxes, compare with those of a broad measure of market performance. The Portfolio's past performance (before and after taxes) is not an indication of future results. Updated performance information for the Portfolio can be obtained by visiting <https://www.dimensional.com/us-en/funds>.

The after-tax returns presented in the table for the Core Fixed Income ETF are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown in the table. In addition, the after-tax returns shown are not relevant to investors who hold shares of the Portfolio through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

## Dimensional Core Fixed Income ETF—Total Returns

	-13.01%	-11.27%

## Investment Advisor/Portfolio Management

Dimensional Fund Advisors LP serves as the investment advisor for the Core Fixed Income ETF. Dimensional Fund Advisors Ltd. and DFA Australia Limited serve as the sub-advisors for the Portfolio. The following individuals are responsible for leading the day-to-day management of the Portfolio:

- **Joseph F. Kolerich**, Head of Fixed Income, Americas, member of the Investment Committee, Vice President, and Senior Portfolio Manager of the Advisor, has been a portfolio manager of the Portfolio since inception (2021).
- **David A. Plecha**, Global Head of Fixed Income Portfolio Management, member of the Investment Committee, Vice President, and Senior Portfolio Manager of the Advisor, has been a portfolio manager of the Portfolio since inception (2021).
- **Lovell D. Shao**, Vice President and Senior Portfolio Manager of the Advisor, has been a portfolio manager of the Portfolio since inception (2021).

## Purchase and Sale of Fund Shares

The Core Fixed Income ETF issues (or redeems) shares at NAV only to certain financial institutions that have entered into agreements with the Portfolio's distributor in large aggregated blocks known as "Creation Units." A Creation Unit of the Portfolio consists of 50,000 shares. Creation Units are issued (or redeemed) in-kind for securities and an amount of cash that the Portfolio specifies each day at the NAV next determined after receipt of an order. However, the Portfolio also reserves the right to permit or require Creation Units to be issued (or redeemed) entirely or partially for cash.

Individual Portfolio shares may only be purchased and sold on NYSE Arca, Inc., other national securities exchanges, electronic crossing networks and other alternative trading systems through your broker-dealer at market prices. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares (bid) and the lowest price a seller is willing to accept for shares (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). Because Portfolio shares trade at market prices rather than at NAV, Portfolio shares may trade at a price less than (discount) or greater than (premium) the Portfolio's NAV. Recent information, including information on the Portfolio's NAV, market price, premiums and discounts, and bid-ask spreads, is available on the Portfolio's website at <https://www.dimensional.com/us-en/funds>.

## Tax Information

The dividends and distributions you receive from the Core Fixed Income ETF are taxable and generally will be taxed as ordinary income, capital gains, or some combination of both, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or an individual retirement account, in which case distributions may be taxed as ordinary income when withdrawn from the plan or account.

## Payments to Financial Intermediaries

If you purchase the Core Fixed Income ETF through a broker-dealer or other financial intermediary (such as a bank), the Portfolio and its related companies may pay the intermediary for the sale of the Portfolio shares and/or related services. These payments may create a conflict of interest by influencing the financial intermediary to recommend the Portfolio over another investment. Ask your financial advisor or visit your financial intermediary's website for more information.

# Dimensional Short-Duration Fixed Income ETF

## Investment Objective

The investment objective of the Dimensional Short-Duration Fixed Income ETF (the “Short-Duration Fixed Income ETF” or “Portfolio”) is to maximize total returns from the universe of fixed income securities in which the Portfolio invests. Total return is comprised of income and capital appreciation.

## Fees and Expenses of the Portfolio

This table describes the fees and expenses you may pay if you buy, hold or sell shares of the Short-Duration Fixed Income ETF. **You may also incur usual and customary brokerage commissions when buying or selling shares of the Portfolio, which are not reflected in the table or Example that follows.**

---

**Shareholder Fees (fees paid directly from your investment): None**

**Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)\***

Management Fee	0.15%
Other Expenses	0.03%
Total Annual Fund Operating Expenses	0.18%
Fee Waiver and/or Expense Reimbursement**	0.02%
Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement	0.16%

\* The “Management Fee” and “Total Annual Fund Operating Expenses” have been adjusted to reflect the decrease in the management fee payable by the Portfolio from 0.16% to 0.15% effective as of February 28, 2023.

\*\* Dimensional Fund Advisors LP (the “Advisor”) has agreed to waive certain fees and in certain instances, assume certain expenses of the Portfolio. The Fee Waiver and Expense Assumption Agreement for the Portfolio will remain in effect through February 28, 2024, and may only be terminated by the Fund’s Board of Trustees prior to that date. The Advisor retains the right to seek reimbursement for any fees previously waived and/or expenses previously assumed up to thirty-six months after such fee waiver and/or expense assumption.

## EXAMPLE

This Example is meant to help you compare the cost of investing in the Short-Duration Fixed Income ETF with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Portfolio for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Portfolio’s operating expenses remain the same. The costs for the Portfolio reflect the net expenses of the Portfolio that result from the contractual expense waiver in the first year only. Although your actual costs may be higher or lower, based on these assumptions, your costs whether you redeem or hold your shares would be:

1 Year	3 Years	5 Years	10 Years
\$16	\$56	\$99	\$228

## PORTFOLIO TURNOVER

The Short-Duration Fixed Income ETF pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Portfolio shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Portfolio’s performance. During the period

November 15, 2021 to October 31, 2022, the Portfolio's portfolio turnover rate was 32% of the average value of its investment portfolio.

## Principal Investment Strategies

The Short-Duration Fixed Income ETF will seek to achieve its investment objective through exposure to a broad portfolio of U.S. and foreign corporate debt securities with an investment grade rating. In addition, the Portfolio may invest in obligations issued or guaranteed by the U.S. and foreign governments, their agencies and instrumentalities, including mortgage-backed securities, bank obligations, commercial paper, repurchase agreements, money market funds, corporate debt obligations having investment grade ratings, securities of domestic or foreign issuers denominated in U.S. dollars but not trading in the United States, and obligations of supranational organizations. As a non-fundamental policy, under normal circumstances, at least 80% of the Portfolio's net assets will be invested in fixed income securities considered to be investment grade quality. In addition, the Portfolio is authorized to invest more than 25% of its total assets in U.S. Treasury bonds, bills and notes, and obligations of federal agencies and instrumentalities.

The Portfolio may invest in fixed income securities considered investment grade at the time of purchase (e.g., rated BBB- or above by S&P Global Ratings ("S&P") or Fitch Ratings Ltd. ("Fitch") or Baa3 or above by Moody's Investor's Service, Inc. ("Moody's")). The Portfolio may invest with an emphasis on debt securities rated in the lower half of the investment grade spectrum (e.g., rated BBB- to A+ by S&P or Fitch or Baa3 to A1 by Moody's). The Portfolio will not emphasize investments in the lower half of the investment grade spectrum, however, when the Advisor believes the expected credit premium (i.e., the expected incremental return on investment for holding obligations considered to have greater credit risk than direct obligations of the U.S. Treasury) is relatively low. The Advisor expects that the Portfolio will primarily invest in the obligations of issuers that are in developed countries.

The Portfolio primarily invests in securities that mature within five years from the date of settlement. Under normal circumstances, the Portfolio will generally maintain a weighted average duration of no more than one half year greater than, and no less than one year below, the weighted average duration of the Portfolio's benchmark, the ICE BofA 1-5 Year US Corporate & Government Index, which was approximately 2.56 years as of December 31, 2022. In making these purchase decisions, if the expected term premium is greater for longer-term securities in the eligible maturity range, the Advisor will focus on investment in the longer-term area, otherwise, the Portfolio will focus its investment in the shorter-term area of the eligible maturity range. Duration is a measure of the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates.

The Portfolio's investments may include securities denominated in foreign currencies. The Portfolio intends to hedge foreign currency exposure to attempt to protect against uncertainty in the level of future foreign currency rates. The Portfolio may enter into foreign currency forward contracts to hedge against fluctuations in currency exchange rates or to transfer balances from one currency to another. The Portfolio may enter into credit default swaps on issuers or indices to buy or sell credit protection to hedge its credit exposure; gain market or issuer exposure without owning the underlying securities; or increase the Portfolio's total return. The Portfolio may purchase or sell futures contracts and options on futures contracts, to hedge its currency exposure or to hedge its interest rate exposure or for non-hedging purposes, such as a substitute for direct investment or to increase or decrease market exposure based on actual or expected cash inflows to or outflows from the Portfolio.

The Portfolio may lend its portfolio securities to generate additional income.

The Portfolio is an actively managed exchange-traded fund and does not seek to replicate the performance of a specific index and may have a higher degree of portfolio turnover than such index funds.

## Principal Risks

Because the value of your investment in the Short-Duration Fixed Income ETF will fluctuate, there is the risk that you will lose money. An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following is a description of principal risks of investing in the Portfolio.

**Market Risk:** Even a long-term investment approach cannot guarantee a profit. Economic, political, and issuer-specific events will cause the value of securities, and the Portfolio that owns them, to rise or fall.

**Interest Rate Risk:** Fixed income securities are subject to interest rate risk because the prices of fixed income securities tend to move in the opposite direction of interest rates. When interest rates rise, fixed income security prices fall. During periods of very low or negative interest rates, the Portfolio may be subject to a greater risk of rising interest rates. When interest rates fall, fixed income security prices rise. In general, fixed income securities with longer maturities are more sensitive to changes in interest rates.

**Credit Risk:** Credit risk is the risk that the issuer of a security may be unable to make interest payments and/or repay principal when due. A downgrade to an issuer's credit rating or a perceived change in an issuer's financial strength may affect a security's value, and thus, impact the Portfolio's performance. Government agency obligations have different levels of credit support and, therefore, different degrees of credit risk. Securities issued by agencies and instrumentalities of the U.S. government that are supported by the full faith and credit of the United States, such as the Federal Housing Administration and Ginnie Mae, present little credit risk. Other securities issued by agencies and instrumentalities sponsored by the U.S. government, that are supported only by the issuer's right to borrow from the U.S. Treasury, subject to certain limitations, and securities issued by agencies and instrumentalities sponsored by the U.S. government that are sponsored by the credit of the issuing agencies, such as Freddie Mac and Fannie Mae, are subject to a greater degree of credit risk. U.S. government agency securities issued or guaranteed by the credit of the agency may still involve a risk of nonpayment of principal and/or interest.

**Income Risk:** Income risk is the risk that falling interest rates will cause the Portfolio's income to decline because, among other reasons, the proceeds from maturing short-term securities in its portfolio may be reinvested in lower-yielding securities.

**Call Risk:** Call risk is the risk that during periods of falling interest rates, an issuer will call or repay a higher-yielding fixed income security before its maturity date, forcing the Portfolio to reinvest in fixed income securities with lower interest rates than the original obligations.

**Foreign Securities and Currencies Risk:** Foreign securities prices may decline or fluctuate because of: (a) economic or political actions of foreign governments, and/or (b) less regulated or liquid securities markets. Investors holding these securities may also be exposed to foreign currency risk (the possibility that foreign currency will fluctuate in value against the U.S. dollar or that a foreign government will convert, or be forced to convert, its currency to another currency, changing its value against the U.S. dollar). The Portfolio hedges foreign currency risk.

**Foreign Government Debt Risk:** The risk that: (a) the governmental entity that controls the repayment of government debt may not be willing or able to repay the principal and/or to pay the interest when it becomes due, due to factors such as political considerations, the relative size of the governmental entity's debt position in relation to the economy, cash flow problems, insufficient foreign currency reserves, the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies, and/or other national economic factors; (b) governments may default on their debt securities, which may require holders of such securities to participate in debt rescheduling; and (c) there is no legal or bankruptcy process by which defaulted government debt may be collected in whole or in part.

**Mortgage-Backed Securities Risk:** Mortgage-backed securities represent interests in "pools" of mortgages and often involve risks that are different from or potentially more significant than risks associated with other types of debt instruments. Mortgage securities differ from typical debt securities in that principal is not paid back at

maturity, but rather periodically over the life of the security. The Portfolio may receive unscheduled payments of principal due to voluntary prepayments, refinancings or foreclosures on the underlying mortgage loans. When interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the returns of the Portfolio because it may have to reinvest that money at the lower prevailing interest rates. As a result, mortgage securities may be less effective than some other types of debt securities as a means of securing long-term interest rates and may have less potential for capital appreciation during periods of falling interest rates. Conversely, in a period of rising interest rates, the Portfolio may exhibit additional volatility since rising interest rates tend to extend the duration of fixed rate mortgage-related securities, making them more sensitive to changes in interest rates. As interest rates rise mortgage borrowers are less likely to exercise prepayment options, which may reduce the value of these securities and potentially cause the Portfolio to lose money. This is known as extension risk.

**Derivatives Risk:** Derivatives are instruments, such as swaps and futures contracts, and options thereon, and foreign currency forward contracts, whose value is derived from that of other assets, rates or indices. Derivatives can be used for hedging (attempting to reduce risk by offsetting one investment position with another) or non-hedging purposes. Hedging with derivatives may increase expenses, and there is no guarantee that a hedging strategy will work. In regard to currency hedging, it is generally not possible to precisely match the foreign currency exposure of such foreign currency forward contracts to the value of the securities involved due to fluctuations in the market values of such securities and cash flows into and out of the Portfolio between the date a foreign currency forward contract is entered into and the date it expires. While hedging can reduce or eliminate losses, it can also reduce or eliminate gains or cause losses if the market moves in a manner different from that anticipated by the Portfolio or if the cost of the derivative outweighs the benefit of the hedge. The use of derivatives for non-hedging purposes may be considered to carry more risk than other types of investments. When the Portfolio uses derivatives, the Portfolio will be directly exposed to the risks of those derivatives. Derivative instruments are subject to a number of risks including counterparty, settlement, liquidity, interest rate, market, credit, and management risks, as well as the risk of improper valuation. Changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, and the Portfolio could lose more than the principal amount invested. Additional risks are associated with the use of swaps including counterparty and credit risk (the risk that the other party to a swap agreement will not fulfill its contractual obligations, whether because of bankruptcy or other default) and liquidity risk (the possible lack of a secondary market for the swap agreement). Credit risk will increase when the Portfolio is the seller of swaps and counterparty risk will increase when the Portfolio is a buyer of swaps. In addition, where the Portfolio is the seller of swaps, it may be required to liquidate portfolio securities at inopportune times in order to meet payment obligations. Swaps may be illiquid or difficult to value.

**Liquidity Risk:** Liquidity risk exists when particular portfolio investments are difficult to purchase or sell. To the extent that the Portfolio holds illiquid investments, the Portfolio's performance may be reduced due to an inability to sell the investments at opportune prices or times. Liquid portfolio investments may become illiquid or less liquid after purchase by the Portfolio due to low trading volume, adverse investor perceptions and/or other market developments. Liquidity risk includes the risk that the Portfolio will experience significant net redemptions at a time when it cannot find willing buyers for its portfolio securities or can only sell its portfolio securities at a material loss or at increased costs. Liquidity risk can be more pronounced in periods of market turmoil or in situations where ownership of shares of the Portfolio are concentrated in one or a few investors.

**Market Trading Risk:** Active trading markets for the Portfolio's shares may not be developed or maintained by market makers or authorized participants. Authorized participants are not obligated to make a market in the Portfolio's shares or to submit purchase or redemption orders for creation units. Trading in shares on an exchange may be halted in certain circumstances. There can be no assurance that the requirements of the listing exchange necessary to maintain the listing of the Portfolio will continue to be met.

**Premium/Discount Risk:** The net asset value ("NAV") of the Portfolio and the value of your investment may fluctuate. Disruptions to creations and redemptions or the market price of the Portfolio's holdings, the existence of extreme market volatility or potential lack of an active trading market for shares may widen bid-ask spreads and result in shares trading at a significant premium or discount to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

**International Closed Market Trading Risk:** To the extent that the underlying securities held by the Portfolio trade on an exchange that is closed when the securities exchange on which the Portfolio shares list and trade is open, there may be market uncertainty about the stale security pricing (i.e., the last quote from its closed foreign market) resulting in premiums or discounts to NAV that may be greater than those experienced by other ETFs.

**Securities Lending Risk:** Securities lending involves the risk that the borrower may fail to return the securities in a timely manner or at all. As a result, the Portfolio may lose money and there may be a delay in recovering the loaned securities. The Portfolio could also lose money if it does not recover the securities and/or the value of the collateral falls, including the value of investments made with cash collateral. Securities lending also may have certain adverse tax consequences.

**Operational Risk:** Operational risks include human error, changes in personnel, system changes, faults in communication, and failures in systems, technology, or processes. Various operational events or circumstances are outside the Advisor's control, including instances at third parties. The Portfolio and the Advisor will seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

**Cyber Security Risk:** The Portfolio's and its service providers' use of internet, technology and information systems may expose the Portfolio to potential risks linked to cyber security breaches of those technological or information systems. Cyber security breaches, amongst other things, could allow an unauthorized party to gain access to proprietary information, customer data, or fund assets, or cause the Portfolio and/or its service providers to suffer data corruption or lose operational functionality.

**Large Shareholder Risk:** Certain shareholders, including other funds or accounts advised by the Advisor, may from time to time own a substantial amount of the Portfolio's shares. In addition, a third party investor, the Advisor, an authorized participant, a lead market maker, or another entity may invest in the Portfolio and hold its investment for a limited period of time solely to facilitate commencement of the Portfolio or to facilitate the Portfolio achieving a specified size or scale. There can be no assurance that any large shareholder would not redeem its investment, that the size of the Portfolio would be maintained at such levels or that the Portfolio would continue to meet applicable listing requirements. Redemptions by large shareholders could have a significant negative impact on the Portfolio. In addition, transactions by large shareholders may account for a large percentage of the trading volume on the listing exchange and may, therefore, have a material upward or downward effect on the market price of the shares.

## Performance

The bar chart and table immediately following illustrate the variability of the Short-Duration Fixed Income ETF's returns and are meant to provide some indication of the risks of investing in the Portfolio. The bar chart shows the changes in the Portfolio's performance from year to year. The table illustrates how annualized one year and since inception returns, both before and after taxes, compare with those of a broad measure of market performance. The Portfolio's past performance (before and after taxes) is not an indication of future results. Updated performance information for the Portfolio can be obtained by visiting <https://www.dimensionalfunds.com/us-en/funds>.

The after-tax returns presented in the table for the Short-Duration Fixed Income ETF are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown in the table. In addition, the after-tax returns shown are not relevant to investors who hold shares of the Portfolio through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

## Dimensional Short-Duration Fixed Income ETF—Total Returns

### January 2022-December 2022

Highest Quarter	Lowest Quarter
1.55% (10/22–12/22)	-3.96% (1/22–3/22)

### Annualized Returns (%) Periods ending December 31, 2022

	1 Year	Since 11/15/21 Inception
<b>Dimensional Short-Duration Fixed Income ETF</b>		
Return Before Taxes	-5.87%	-5.34%
Return After Taxes on Distributions	-6.66%	-6.09%
Return After Taxes on Distributions and Sale of Portfolio Shares	-3.47%	-4.37%
<b>ICE BofA 1-5 Year US Corporate &amp; Government Index</b>		
(reflects no deduction for fees, expenses, or taxes on sales)	-5.54%	-5.00%

## Investment Advisor/Portfolio Management

Dimensional Fund Advisors LP serves as the investment advisor for the Short-Duration Fixed Income ETF. Dimensional Fund Advisors Ltd. and DFA Australia Limited serve as the sub-advisors for the Portfolio. The following individuals are responsible for leading the day-to-day management of the Portfolio:

- **Lacey N. Huebel**, Head of Responsible Investment, North America, Vice President and Senior Portfolio Manager of the Advisor, has been a portfolio manager of the Portfolio since inception (2021).
- **Joseph F. Kolerich**, Head of Fixed Income, Americas, member of the Investment Committee, Vice President, and Senior Portfolio Manager of the Advisor, has been a portfolio manager of the Portfolio since inception (2021).
- **David A. Plecha**, Global Head of Fixed Income Portfolio Management, member of the Investment Committee, Vice President, and Senior Portfolio Manager of the Advisor, has been a portfolio manager of the Portfolio since inception (2021).

## Purchase and Sale of Fund Shares

The Short-Duration Fixed Income ETF issues (or redeems) shares at NAV only to certain financial institutions that have entered into agreements with the Portfolio's distributor in large aggregated blocks known as "Creation Units." A Creation Unit of the Portfolio consists of 50,000 shares. Creation Units are issued (or redeemed) in-kind for securities and an amount of cash that the Portfolio specifies each day at the NAV next determined after receipt of an order. However, the Portfolio also reserves the right to permit or require Creation Units to be issued (or redeemed) entirely or partially for cash.

Individual Portfolio shares may only be purchased and sold on NYSE Arca, Inc., other national securities exchanges, electronic crossing networks and other alternative trading systems through your broker-dealer at market prices. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares (bid) and the lowest price a seller is willing to accept for shares (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). Because Portfolio shares trade at market prices rather than at NAV, Portfolio shares may trade at a price less than (discount) or greater than (premium) the Portfolio's NAV. Recent information, including information on the Portfolio's NAV, market price, premiums and discounts, and bid-ask spreads, is available on the Portfolio's website at <https://www.dimensional.com/us-en/funds>.

## Tax Information

The dividends and distributions you receive from the Short-Duration Fixed Income ETF are taxable and generally will be taxed as ordinary income, capital gains, or some combination of both, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or an individual retirement account, in which case distributions may be taxed as ordinary income when withdrawn from the plan or account.

## Payments to Financial Intermediaries

If you purchase the Short-Duration Fixed Income ETF through a broker-dealer or other financial intermediary (such as a bank), the Portfolio and its related companies may pay the intermediary for the sale of the Portfolio shares and/or related services. These payments may create a conflict of interest by influencing the financial intermediary to recommend the Portfolio over another investment. Ask your financial advisor or visit your financial intermediary's website for more information.

# Dimensional Inflation-Protected Securities ETF

## Investment Objective

The investment objective of the Dimensional Inflation-Protected Securities ETF (the "Inflation-Protected ETF" or "Portfolio") is to provide inflation protection and earn current income consistent with inflation-protected securities.

## Fees and Expenses of the Portfolio

This table describes the fees and expenses you may pay if you buy, hold or sell shares of the Inflation-Protected ETF. **You may also incur usual and customary brokerage commissions when buying or selling shares of the Portfolio, which are not reflected in the table or Example that follows.**

---

**Shareholder Fees (fees paid directly from your investment): None**

**Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)**

Management Fee	0.09%
Other Expenses	0.05%
Total Annual Fund Operating Expenses	0.14%
Fee Waiver and/or Expense Reimbursement*	0.03%
Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement	0.11%

\* Dimensional Fund Advisors LP (the "Advisor") has agreed to waive certain fees and in certain instances, assume certain expenses of the Portfolio. The Fee Waiver and Expense Assumption Agreement for the Portfolio will remain in effect through February 28, 2024, and may only be terminated by the Fund's Board of Trustees prior to that date. The Advisor retains the right to seek reimbursement for any fees previously waived and/or expenses previously assumed up to thirty-six months after such fee waiver and/or expense assumption.

### EXAMPLE

This Example is meant to help you compare the cost of investing in the Inflation-Protected ETF with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Portfolio for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Portfolio's operating expenses remain the same. The costs for the Portfolio reflect the net expenses of the Portfolio that result from the contractual expense waiver in the first year only. Although your actual costs may be higher or lower, based on these assumptions, your costs whether you redeem or hold your shares would be:

1 Year	3 Years	5 Years	10 Years
\$11	\$42	\$76	\$176

### PORTFOLIO TURNOVER

The Inflation-Protected ETF pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Portfolio shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Portfolio's performance. During the period November 15, 2021 to October 31, 2022, the Portfolio's portfolio turnover rate was 20% of the average value of its investment portfolio.

## Principal Investment Strategies

The Inflation-Protected ETF will seek to achieve its investment objective by investing in a universe of inflation-protected securities that are structured to provide returns linked to the rate of inflation over the long-term. The Portfolio ordinarily invests in inflation-protected securities issued by the U.S. Government and its agencies and instrumentalities and the credit quality of such inflation-protected securities will be that of such applicable U.S. Government, agency or instrumentality issuer.

As a non-fundamental policy, under normal circumstances, at least 80% of the Portfolio's net assets will be invested in inflation-protected securities. Inflation-protected securities (also known as inflation-indexed securities) are securities whose principal and/or interest payments are adjusted for inflation, unlike conventional debt securities that make fixed principal and interest payments. Inflation-protected securities include Treasury Inflation-Protected Securities ("TIPS"), which are securities issued by the U.S. Treasury. The principal value of TIPS is adjusted for inflation (payable at maturity) and the semi-annual interest payments by TIPS equal a fixed percentage of the inflation-adjusted principal amount. These inflation adjustments are based upon the Consumer Price Index for Urban Consumers (CPI-U). The original principal value of TIPS is guaranteed. At maturity, TIPS are redeemed at the greater of their inflation-adjusted principal or par amount at original issue. Other types of inflation-protected securities may use other methods to adjust for inflation and other measures of inflation. In addition, inflation-protected securities issued by entities other than the U.S. Treasury may not provide a guarantee of principal value at maturity.

Generally, the Portfolio will purchase inflation-protected securities with maturities between five and twenty years from the date of settlement, although at times, the Portfolio may purchase securities outside of this range. Under normal circumstances, when determining its duration, the Portfolio will consider an average duration similar to its benchmark, the Bloomberg U.S. TIPS Index, which was approximately 6.60 years as of December 31, 2022. Duration is a measure of the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates.

The Portfolio is authorized to invest more than 25% of its total assets in U.S. Treasury bonds, bills and notes and obligations of U.S. government agencies and instrumentalities. The Portfolio may also invest in money market funds. The Portfolio will not shift the maturity of its investments in anticipation of interest rate movements.

The Portfolio may purchase or sell futures contracts and options on futures contracts, to hedge its interest rate exposure or for non-hedging purposes, such as a substitute for direct investment or to increase or decrease market exposure based on actual or expected cash inflows to or outflows from the Portfolio.

The Portfolio may lend its portfolio securities to generate additional income.

The Portfolio is an actively managed exchange-traded fund and does not seek to replicate the performance of a specific index and may have a higher degree of portfolio turnover than such index funds.

## Principal Risks

Because the value of your investment in the Inflation-Protected ETF will fluctuate, there is the risk that you will lose money. An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following is a description of principal risks of investing in the Portfolio.

**Market Risk:** Even a long-term investment approach cannot guarantee a profit. Economic, political, and issuer-specific events will cause the value of securities, and the Portfolio that owns them, to rise or fall.

**Interest Rate Risk:** Fixed income securities are subject to interest rate risk because the prices of fixed income securities tend to move in the opposite direction of interest rates. When interest rates rise, fixed income security prices fall. During periods of very low or negative interest rates, the Portfolio may be subject to a greater risk of rising interest rates. When interest rates fall, fixed income security prices rise. In general, fixed income securities with longer maturities are more sensitive to changes in interest rates.

***Inflation-Protected Securities Tax Risk:*** Any increase in the principal amount of an inflation-protected security may be included for tax purposes in the Portfolio's gross income, even though no cash attributable to such gross income has been received by the Portfolio. In such event, the Portfolio may be required to make annual gross distributions to shareholders that exceed the cash it has otherwise received. In order to pay such distributions, the Portfolio may be required to raise cash by selling its investments. The sale of such investments could result in capital gains to the Portfolio and additional capital gain distributions to shareholders. In addition, adjustments during the taxable year for deflation to an inflation-indexed bond held by the Portfolio may cause amounts previously distributed to shareholders in the taxable year as income to be characterized as a return of capital.

***Inflation-Protected Securities Interest Rate Risk:*** Inflation-protected securities may react differently from other fixed income securities to changes in interest rates. Because interest rates on inflation-protected securities are adjusted for inflation, the values of these securities are not materially affected by inflation expectations. Therefore, the value of inflation-protected securities are anticipated to change in response to changes in "real" interest rates, which represent nominal (stated) interest rates reduced by the expected impact of inflation. Generally, the value of an inflation-protected security will fall when real interest rates rise and will rise when real interest rates fall.

***Credit Risk:*** Credit risk is the risk that the issuer of a security may be unable to make interest payments and/or repay principal when due. A downgrade to an issuer's credit rating or a perceived change in an issuer's financial strength may affect a security's value, and thus, impact the Portfolio's performance. Government agency obligations have different levels of credit support and, therefore, different degrees of credit risk. Securities issued by agencies and instrumentalities of the U.S. government that are supported by the full faith and credit of the United States, such as the Federal Housing Administration and Ginnie Mae, present little credit risk. Other securities issued by agencies and instrumentalities sponsored by the U.S. government, that are supported only by the issuer's right to borrow from the U.S. Treasury, subject to certain limitations, and securities issued by agencies and instrumentalities sponsored by the U.S. government that are sponsored by the credit of the issuing agencies, such as Freddie Mac and Fannie Mae, are subject to a greater degree of credit risk. U.S. government agency securities issued or guaranteed by the credit of the agency may still involve a risk of nonpayment of principal and/or interest.

***Risks of Investing for Inflation Protection:*** Because the interest and/or principal payments on an inflation-protected security are adjusted periodically for changes in inflation, the income distributed by the Portfolio may be irregular. Although the U.S. Treasury guarantees to pay at maturity at least the original face value of any inflation-protected securities the Treasury issues, other issuers may not offer the same guarantee. Also, inflation-protected securities, including those issued by the U.S. Treasury, are not protected against deflation. As a result, in a period of deflation, the principal and income of inflation-protected securities held by the Portfolio will decline and the Portfolio may suffer a loss during such periods. While inflation-protected securities are expected to be protected from long-term inflationary trends, short-term increases in inflation may lead to a decline in the Portfolio's value. For example, if interest rates rise due to reasons other than inflation, the Portfolio's investment in these securities may not be protected to the extent that the increase is not reflected in the securities' inflation measures. In addition, positive adjustments to principal generally will result in taxable income to the Portfolio at the time of such adjustments (which generally would be distributed by the Portfolio as part of its taxable dividends), even though the principal amount is not paid until maturity. The current market value of inflation-protected securities is not guaranteed and will fluctuate.

***Income Risk:*** Income risk is the risk that falling interest rates will cause the Portfolio's income to decline because, among other reasons, the proceeds from maturing short-term securities in its portfolio may be reinvested in lower-yielding securities.

***Derivatives Risk:*** Derivatives are instruments, such as futures contracts, and options thereon, whose value is derived from that of other assets, rates or indices. The use of derivatives for non-hedging purposes may be considered to carry more risk than other types of investments. When the Portfolio uses derivatives, the Portfolio will be directly exposed to the risks of those derivatives. Derivative instruments are subject to a number of risks including counterparty, settlement, liquidity, interest rate, market, credit, and management risks, as well as the risk of improper valuation. Changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, and the Portfolio could lose more than the principal amount invested.

**Liquidity Risk:** Liquidity risk exists when particular portfolio investments are difficult to purchase or sell. To the extent that the Portfolio holds illiquid investments, the Portfolio's performance may be reduced due to an inability to sell the investments at opportune prices or times. Liquid portfolio investments may become illiquid or less liquid after purchase by the Portfolio due to low trading volume, adverse investor perceptions and/or other market developments. Liquidity risk includes the risk that the Portfolio will experience significant net redemptions at a time when it cannot find willing buyers for its portfolio securities or can only sell its portfolio securities at a material loss or at increased costs. Liquidity risk can be more pronounced in periods of market turmoil or in situations where ownership of shares of the Portfolio are concentrated in one or a few investors.

**Market Trading Risk:** Active trading markets for the Portfolio's shares may not be developed or maintained by market makers or authorized participants. Authorized participants are not obligated to make a market in the Portfolio's shares or to submit purchase or redemption orders for creation units. Trading in shares on an exchange may be halted in certain circumstances. There can be no assurance that the requirements of the listing exchange necessary to maintain the listing of the Portfolio will continue to be met.

**Premium/Discount Risk:** The net asset value ("NAV") of the Portfolio and the value of your investment may fluctuate. Disruptions to creations and redemptions or the market price of the Portfolio's holdings, the existence of extreme market volatility or potential lack of an active trading market for shares may widen bid-ask spreads and result in shares trading at a significant premium or discount to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

**Securities Lending Risk:** Securities lending involves the risk that the borrower may fail to return the securities in a timely manner or at all. As a result, the Portfolio may lose money and there may be a delay in recovering the loaned securities. The Portfolio could also lose money if it does not recover the securities and/or the value of the collateral falls, including the value of investments made with cash collateral. Securities lending also may have certain adverse tax consequences.

**Operational Risk:** Operational risks include human error, changes in personnel, system changes, faults in communication, and failures in systems, technology, or processes. Various operational events or circumstances are outside the Advisor's control, including instances at third parties. The Portfolio and the Advisor will seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

**Cyber Security Risk:** The Portfolio's and its service providers' use of internet, technology and information systems may expose the Portfolio to potential risks linked to cyber security breaches of those technological or information systems. Cyber security breaches, amongst other things, could allow an unauthorized party to gain access to proprietary information, customer data, or fund assets, or cause the Portfolio and/or its service providers to suffer data corruption or lose operational functionality.

**Large Shareholder Risk:** Certain shareholders, including other funds or accounts advised by the Advisor, may from time to time own a substantial amount of the Portfolio's shares. In addition, a third party investor, the Advisor, an authorized participant, a lead market maker, or another entity may invest in the Portfolio and hold its investment for a limited period of time solely to facilitate commencement of the Portfolio or to facilitate the Portfolio achieving a specified size or scale. There can be no assurance that any large shareholder would not redeem its investment, that the size of the Portfolio would be maintained at such levels or that the Portfolio would continue to meet applicable listing requirements. Redemptions by large shareholders could have a significant negative impact on the Portfolio. In addition, transactions by large shareholders may account for a large percentage of the trading volume on the listing exchange and may, therefore, have a material upward or downward effect on the market price of the shares.

## Performance

The bar chart and table immediately following illustrate the variability of the Inflation-Protected ETF's returns and are meant to provide some indication of the risks of investing in the Portfolio. The bar chart shows the changes in the Portfolio's performance from year to year. The table illustrates how annualized one year and since inception

returns, both before and after taxes, compare with those of a broad measure of market performance. The Portfolio's past performance (before and after taxes) is not an indication of future results. Updated performance information for the Portfolio can be obtained by visiting <https://www.dimensionalfund.com/us-en/funds>.

The after-tax returns presented in the table for the Inflation-Protected ETF are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown in the table. In addition, the after-tax returns shown are not relevant to investors who hold shares of the Portfolio through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

### Dimensional Inflation-Protected Securities ETF—Total Returns

(reflects no deduction for fees, expenses, or taxes on sales)	-11.85%	-10.75%

## Investment Advisor/Portfolio Management

Dimensional Fund Advisors LP serves as the investment advisor for the Inflation-Protected ETF. Dimensional Fund Advisors Ltd. and DFA Australia Limited serve as the sub-advisors for the Portfolio. The following individuals are responsible for leading the day-to-day management of the Portfolio:

- **Alan R. Hutchison**, Vice President and Senior Portfolio Manager of the Advisor, has been a portfolio manager of the Portfolio since inception (2021).

- **Joseph F. Kolerich**, Head of Fixed Income, Americas, member of the Investment Committee, Vice President, and Senior Portfolio Manager of the Advisor, has been a portfolio manager of the Portfolio since inception (2021).
- **David A. Plecha**, Global Head of Fixed Income Portfolio Management, member of the Investment Committee, Vice President, and Senior Portfolio Manager of the Advisor, has been a portfolio manager of the Portfolio since inception (2021).

## Purchase and Sale of Fund Shares

The Inflation-Protected ETF issues (or redeems) shares at NAV only to certain financial institutions that have entered into agreements with the Portfolio's distributor in large aggregated blocks known as "Creation Units." A Creation Unit of the Portfolio consists of 25,000 shares. Creation Units are issued (or redeemed) in-kind for securities and an amount of cash that the Portfolio specifies each day at the NAV next determined after receipt of an order. However, the Portfolio also reserves the right to permit or require Creation Units to be issued (or redeemed) entirely or partially for cash.

Individual Portfolio shares may only be purchased and sold on NYSE Arca, Inc., other national securities exchanges, electronic crossing networks and other alternative trading systems through your broker-dealer at market prices. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares (bid) and the lowest price a seller is willing to accept for shares (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). Because Portfolio shares trade at market prices rather than at NAV, Portfolio shares may trade at a price less than (discount) or greater than (premium) the Portfolio's NAV. Recent information, including information on the Portfolio's NAV, market price, premiums and discounts, and bid-ask spreads, is available on the Portfolio's website at <https://www.dimensional.com/us-en/funds>.

## Tax Information

The dividends and distributions you receive from the Inflation-Protected ETF are taxable and generally will be taxed as ordinary income, capital gains, or some combination of both, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or an individual retirement account, in which case distributions may be taxed as ordinary income when withdrawn from the plan or account.

## Payments to Financial Intermediaries

If you purchase the Inflation-Protected ETF through a broker-dealer or other financial intermediary (such as a bank), the Portfolio and its related companies may pay the intermediary for the sale of the Portfolio shares and/or related services. These payments may create a conflict of interest by influencing the financial intermediary to recommend the Portfolio over another investment. Ask your financial advisor or visit your financial intermediary's website for more information.

# Dimensional National Municipal Bond ETF

## Investment Objective

The investment objective of the Dimensional National Municipal Bond ETF (the “Municipal Bond ETF” or “Portfolio”) is to seek to provide current income that is expected to be exempt from federal personal income tax.

## Fees and Expenses of the Portfolio

This table describes the fees and expenses you may pay if you buy, hold or sell shares of the Municipal Bond ETF. **You may also incur usual and customary brokerage commissions when buying or selling shares of the Portfolio, which are not reflected in the table or Example that follows.**

---

**Shareholder Fees (fees paid directly from your investment): None**

**Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)**

Management Fee	0.16%
Other Expenses	0.03%
Total Annual Fund Operating Expenses	0.19%
Fee Waiver and/or Expense Reimbursement*	0.02%
Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement	0.17%

\* Dimensional Fund Advisors LP (the “Advisor”) has agreed to waive certain fees and in certain instances, assume certain expenses of the Portfolio. The Fee Waiver and Expense Assumption Agreement for the Portfolio will remain in effect through February 28, 2024, and may only be terminated by the Fund’s Board of Trustees prior to that date. The Advisor retains the right to seek reimbursement for any fees previously waived and/or expenses previously assumed up to thirty-six months after such fee waiver and/or expense assumption.

### EXAMPLE

This Example is meant to help you compare the cost of investing in the Municipal Bond ETF with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Portfolio for the time periods indicated. The Example also assumes that your investment has a 5% return each year and that the Portfolio’s operating expenses remain the same. The costs for the Portfolio reflect the net expenses of the Portfolio that result from the contractual expense waiver in the first year only. Although your actual costs may be higher or lower, based on these assumptions, your costs whether you redeem or hold your shares would be:

1 Year	3 Years	5 Years	10 Years
\$17	\$59	\$105	\$241

### PORTFOLIO TURNOVER

The Municipal Bond ETF pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Portfolio shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Portfolio’s performance. During the period November 15, 2021 to October 31, 2022, the Portfolio’s portfolio turnover rate was 7% of the average value of its investment portfolio.

## Principal Investment Strategies

The Municipal Bond ETF will seek to achieve its investment objective by investing primarily in a universe of investment grade municipal securities, the interest on which is exempt from regular federal income tax. Municipal securities in which the Portfolio may invest include, among others, revenue bonds, general obligation bonds, industrial development bonds, municipal lease obligations, commercial paper, variable rate demand obligations and other instruments (including participation interests in such securities) issued by or on behalf of the states, territories and possessions of the United States (including the District of Columbia) and their political subdivisions, agencies and instrumentalities. The interest on the municipal securities purchased by the Portfolio, in the opinion of bond counsel for the issuers and under current tax law, is exempt from federal income tax (i.e., excludable from gross income for individuals for federal income tax purposes but not necessarily exempt from state or local taxes). As a fundamental investment policy, under normal market conditions, the Portfolio will invest at least 80% of its net assets in municipal securities that pay interest exempt from federal income tax. The Portfolio does not currently intend to invest its assets in municipal securities whose interest is subject to the federal alternative minimum tax.

Under normal circumstances, the Portfolio will generally maintain a dollar-weighted average duration of no more than one half year greater, and no less than one year below, the average duration of the Portfolio's benchmark, the S&P Intermediate Term National AMT-Free Municipal Bond Index, which was approximately 4.48 years as of December 31, 2022. In making purchase decisions, if the expected term premium is greater for longer-term securities in the eligible maturity range, the Advisor will focus investment in the longer-term area, otherwise, the Portfolio will focus investment in the shorter-term area of the eligible maturity range. If a security has been redeemed by the issuer at a date prior to the stated final maturity date for the purposes of the above duration restriction, the early redemption date shall be considered the maturity date regardless of the stated final maturity. Duration is a measure of the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates.

The fixed income securities in which the Portfolio invests are considered investment grade at the time of purchase (e.g., rated BBB- or above by S&P Global Ratings ("S&P") or Fitch Ratings Ltd. ("Fitch") or Baa3 or above by Moody's Investor's Service, Inc. ("Moody's") or an equivalent rating assigned by another nationally recognized statistical rating organization, or that are unrated but have been determined by the Advisor to be of comparable quality). Municipal securities are often issued to obtain funds for various public purposes, including the construction of a wide range of public facilities, such as bridges, highways, housing, hospitals, mass transportation facilities, schools, streets and public utilities, such as water and sewer works. Municipal securities include municipal leases, certificates of participation, municipal obligation components and municipal custody receipts. The Portfolio may invest more than 25% of its assets in municipal securities issued to finance projects in a particular segment of the bond market including, but not limited to, health care, housing, education, utilities, and transportation. The Portfolio also may invest more than 25% of its assets in industrial development bonds.

The Portfolio may (1) purchase certain municipal securities that are insured, (2) invest in municipal securities secured by mortgages on single-family homes and multi-family projects, (3) invest in pre-refunded municipal securities, (4) purchase tax-exempt municipal securities on a "when-issued" basis, and (5) use fixed income related futures and options contracts, credit default swaps and interest rate swaps to hedge against changes in interest rates. The Portfolio may also invest in money market funds. The Portfolio also may purchase or sell futures contracts and options on futures contracts, to hedge its interest rate exposure or for non-hedging purposes, such as a substitute for direct investment or to increase or decrease market exposure based on actual or expected cash inflows or outflows from the Portfolio.

Although the Portfolio attempts to invest all of its assets in tax-exempt securities, it is possible, although not anticipated, that a portion of its assets may be invested in securities that pay taxable interest, including interest that may be subject to the federal alternative minimum tax. These investments could generate taxable income for shareholders.

The Portfolio is an actively managed exchange-traded fund and does not seek to replicate the performance of a specific index and may have a higher degree of portfolio turnover than such index funds.

## Principal Risks

Because the value of your investment in the Municipal Bond ETF will fluctuate, there is the risk that you will lose money. An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following is a description of principal risks of investing in the Portfolio.

**Market Risk:** Even a long-term investment approach cannot guarantee a profit. Economic, political, and issuer-specific events will cause the value of securities, and the Portfolio that owns them, to rise or fall.

**Interest Rate Risk:** Fixed income securities are subject to interest rate risk because the prices of fixed income securities tend to move in the opposite direction of interest rates. When interest rates rise, fixed income security prices fall. During periods of very low or negative interest rates, the Portfolio may be subject to a greater risk of rising interest rates. When interest rates fall, fixed income security prices rise. In general, fixed income securities with longer maturities are more sensitive to changes in interest rates.

**Credit Risk:** Credit risk is the risk that the issuer of a security, including a government entity, may be unable to make interest payments and/or repay principal when due. A downgrade to an issuer's credit rating or a perceived change in an issuer's financial strength may affect a security's value, and thus, impact the Portfolio's performance. The ability of a municipal securities issuer to make payments could be affected by litigation, legislation or other political events or the bankruptcy of the issuer.

**Income Risk:** Income risk is the risk that falling interest rates will cause the Portfolio's income to decline because, among other reasons, the proceeds from maturing short-term securities in its portfolio may be reinvested in lower-yielding securities.

**Call Risk:** Call risk is the risk that during periods of falling interest rates, an issuer will call or repay a higher-yielding fixed income security before its maturity date, forcing the Portfolio to reinvest in fixed income securities with lower interest rates than the original obligations.

**Tax Liability Risk:** Tax liability risk is the risk that distributions by the Portfolio become taxable to shareholders due to noncompliant conduct by a municipal bond issuer, unfavorable changes in federal or state tax laws, or adverse interpretations of tax laws by the Internal Revenue Service or state tax authorities or other factors. Such adverse interpretations or actions could cause interest from a security to become taxable, possibly retroactively, subjecting shareholders to increased tax liability. In addition, such adverse interpretations or actions could cause the value of a security, and therefore, the value of the Portfolio's shares, to decline.

**Municipal Securities Risk:** The risk of a municipal security generally depends on the financial and credit status of the issuer. Municipal securities can be significantly affected by political, regulatory or economic changes, including changes made in the law after issuance of the securities, as well as uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders, including in connection with an issuer's insolvency.

**Municipal Project-Specific Risk:** The Portfolio may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in municipal securities that finance similar types of projects in a segment of the municipal bond market (such as education, health care, housing, education, utilities or transportation) or industrial development bonds. A change that affects one project in a particular segment of the market, such as proposed legislation on the financing of the project, a shortage of the materials needed for the project, or a declining need for the project, would likely affect all similar projects, thereby increasing market risk.

**Derivatives Risk:** Derivatives are instruments, such as swaps, futures contracts, and options thereon, whose value is derived from that of other assets, rates or indices. Derivatives can be used for hedging (attempting to reduce risk by offsetting one investment position with another) or non-hedging purposes. Hedging with derivatives may increase expenses, and there is no guarantee that a hedging strategy will work. While hedging can reduce or eliminate losses, it can also reduce or eliminate gains or cause losses if the market moves in a manner different

from that anticipated by the Portfolio or if the cost of the derivative outweighs the benefit of the hedge. The use of derivatives for non-hedging purposes may be considered to carry more risk than other types of investments. When the Portfolio uses derivatives, the Portfolio will be directly exposed to the risks of those derivatives. Derivative instruments are subject to a number of risks including counterparty, liquidity, interest rate, market, credit and management risks, as well as the risk of improper valuation. Changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, and the Portfolio could lose more than the principal amount invested. Additional risks are associated with the use of swaps including counterparty and credit risk (the risk that the other party to a swap agreement will not fulfill its contractual obligations, whether because of bankruptcy or other default) and liquidity risk (the possible lack of a secondary market for the swap agreement). Credit risk increases when the Portfolio is the seller of swaps and counterparty risk increases when the Portfolio is a buyer of swaps. In addition, where the Portfolio is the seller of swaps, it may be required to liquidate portfolio securities at inopportune times in order to meet payment obligations. Swaps may be illiquid or difficult to value. Additionally, payments made or received by the Portfolio under such derivatives may increase the amount of distributions taxable to you as ordinary income, increase or decrease the amount of capital gain distributions to you and/ or decrease the amount available for distribution to you as exempt-interest dividends.

**Liquidity Risk:** Liquidity risk exists when particular portfolio investments are difficult to purchase or sell. To the extent that the Portfolio holds illiquid investments, the Portfolio's performance may be reduced due to an inability to sell the investments at opportune prices or times. Liquid portfolio investments may become illiquid or less liquid after purchase by the Portfolio due to low trading volume, adverse investor perceptions and/or other market developments. Liquidity risk includes the risk that the Portfolio will experience significant net redemptions at a time when it cannot find willing buyers for its portfolio securities or can only sell its portfolio securities at a material loss or at increased costs. Liquidity risk can be more pronounced in periods of market turmoil or in situations where ownership of shares of the Portfolio are concentrated in one or a few investors.

**Market Trading Risk:** Active trading markets for the Portfolio's shares may not be developed or maintained by market makers or authorized participants. Authorized participants are not obligated to make a market in the Portfolio's shares or to submit purchase or redemption orders for creation units. Trading in shares on an exchange may be halted in certain circumstances. There can be no assurance that the requirements of the listing exchange necessary to maintain the listing of the Portfolio will continue to be met.

**Premium/Discount Risk:** The net asset value ("NAV") of the Portfolio and the value of your investment may fluctuate. Disruptions to creations and redemptions or the market price of the Portfolio's holdings, the existence of extreme market volatility or potential lack of an active trading market for shares may widen bid-ask spreads and result in shares trading at a significant premium or discount to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

**Operational Risk:** Operational risks include human error, changes in personnel, system changes, faults in communication, and failures in systems, technology, or processes. Various operational events or circumstances are outside the Advisor's control, including instances at third parties. The Portfolio and the Advisor will seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

**Cyber Security Risk:** The Portfolio's and its service providers' use of internet, technology and information systems may expose the Portfolio to potential risks linked to cyber security breaches of those technological or information systems. Cyber security breaches, amongst other things, could allow an unauthorized party to gain access to proprietary information, customer data, or fund assets, or cause the Portfolio and/or its service providers to suffer data corruption or lose operational functionality.

**Large Shareholder Risk:** Certain shareholders, including other funds or accounts advised by the Advisor, may from time to time own a substantial amount of the Portfolio's shares. In addition, a third party investor, the Advisor, an authorized participant, a lead market maker, or another entity may invest in the Portfolio and hold its investment for a limited period of time solely to facilitate commencement of the Portfolio or to facilitate the Portfolio achieving a specified size or scale. There can be no assurance that any large shareholder would not redeem its investment, that the size of the Portfolio would be maintained at such levels or that the Portfolio would continue to meet applicable listing requirements. Redemptions by large shareholders could have a

significant negative impact on the Portfolio. In addition, transactions by large shareholders may account for a large percentage of the trading volume on the listing exchange and may, therefore, have a material upward or downward effect on the market price of the shares.

## Performance

The bar chart and table immediately following illustrate the variability of the Municipal Bond ETF's returns and are meant to provide some indication of the risks of investing in the Portfolio. The bar chart shows the changes in the Portfolio's performance from year to year. The table illustrates how annualized one year and since inception returns, both before and after taxes, compare with those of a broad measure of market performance. The Portfolio's past performance (before and after taxes) is not an indication of future results. Updated performance information for the Portfolio can be obtained by visiting <https://www.dimensionalfund.com/us-en/funds>.

The after-tax returns presented in the table for the Municipal Bond ETF are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown in the table. In addition, the after-tax returns shown are not relevant to investors who hold shares of the Portfolio through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

### Dimensional National Municipal Bond ETF—Total Returns

#### January 2022-December 2022

Highest Quarter 2.88% (10/22–12/22)	Lowest Quarter -3.79% (1/22–3/22)
----------------------------------------	--------------------------------------

### Annualized Returns (%) Periods ending December 31, 2022

	1 Year	Since 11/15/21 Inception
<b>Dimensional National Municipal Bond ETF</b>		
Return Before Taxes	-4.02%	-3.19%
Return After Taxes on Distributions	-4.48%	-3.59%
Return After Taxes on Distributions and Sale of Portfolio Shares	-2.38%	-2.58%
<b>S&amp;P Intermediate Term National AMT-Free Municipal Bond Index</b> (reflects no deduction for fees, expenses, or taxes on sales)	-5.63%	-4.73%

## Investment Advisor/Portfolio Management

Dimensional Fund Advisors LP serves as the investment advisor for the Municipal Bond ETF. Dimensional Fund Advisors Ltd. and DFA Australia Limited serve as the sub-advisors for the Portfolio. The following individuals are responsible for leading the day-to-day management of the Portfolio:

- **Joseph F. Kolerich**, Head of Fixed Income, Americas, member of the Investment Committee, Vice President, and Senior Portfolio Manager of the Advisor, has been a portfolio manager of the Portfolio since inception (2021).
- **Travis A. Meldau**, Vice President and Senior Portfolio Manager of the Advisor, has been a portfolio manager of the Portfolio since inception (2021).
- **David A. Plecha**, Global Head of Fixed Income Portfolio Management, member of the Investment Committee, Vice President, and Senior Portfolio Manager of the Advisor, has been a portfolio manager of the Portfolio since inception (2021).

## Purchase and Sale of Fund Shares

The Municipal Bond ETF issues (or redeems) shares at NAV only to certain financial institutions that have entered into agreements with the Portfolio's distributor in large aggregated blocks known as "Creation Units." A Creation Unit of the Portfolio consists of 50,000 shares. Creation Units are generally issued (or redeemed) in exchange for cash or in-kind for securities and a specified amount of cash that the Portfolio specifies each day at the NAV next determined after receipt of an order.

Individual Portfolio shares may only be purchased and sold on NYSE Arca, Inc., other national securities exchanges, electronic crossing networks and other alternative trading systems through your broker-dealer at market prices. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares (bid) and the lowest price a seller is willing to accept for shares (ask) when buying or selling shares in the secondary market (the "bid-ask spread"). Because Portfolio shares trade at market prices rather than at NAV, Portfolio shares may trade at a price less than (discount) or greater than (premium) the Portfolio's NAV. Recent information, including information on the Portfolio's NAV, market price, premiums and discounts, and bid-ask spreads, is available on the Portfolio's website at <https://www.dimensionalfund.com/us-en/funds>.

## Tax Information

The distributions you receive from the Municipal Bond ETF primarily are exempt from regular federal income tax. A portion of these distributions, however, may be subject to the federal alternative minimum tax and state and local taxes. The Portfolio may also make distributions that generally are taxable to you as ordinary income or capital gains.

## Payments to Financial Intermediaries

If you purchase the Municipal Bond ETF through a broker-dealer or other financial intermediary (such as a bank), the Portfolio and its related companies may pay the intermediary for the sale of the Portfolio shares and/or related services. These payments may create a conflict of interest by influencing the financial intermediary to recommend the Portfolio over another investment. Ask your financial advisor or visit your financial intermediary's website for more information.

## Additional Information on Investment Objectives and Policies

Dimensional ETF Trust (the “Trust”) offers a variety of investment portfolios. Each of the investment company’s portfolios has its own investment objective and is the equivalent of a separate exchange-traded fund (“ETF”). Shares of the Dimensional Core Fixed Income ETF (“Core Fixed Income ETF”), Dimensional Short-Duration Fixed Income ETF (“Short-Duration Fixed Income ETF”), Dimensional Inflation-Protected Securities ETF (“Inflation-Protected ETF”) and Dimensional National Municipal Bond ETF (“Municipal Bond ETF”) (each, a “Portfolio” and collectively, the “Portfolios”) are offered in this Prospectus. The Portfolios are designed for long-term investors.

The investment objective of each Portfolio is as follows:

*Core Fixed Income ETF*—to seek to maximize total returns from the universe of eligible investments. Total return is comprised of income and capital appreciation.

*Short-Duration Fixed Income ETF*—to maximize total returns from the universe of fixed income securities in which the Portfolio invests. Total return is comprised of income and capital appreciation.

*Inflation-Protected ETF*—to provide inflation protection and earn current income consistent with inflation-protected securities.

*Municipal Bond ETF*—to seek to provide current income that is expected to be exempt from federal personal income tax.

Each Portfolio’s investment objective is non-fundamental, which means it may be changed by the Board of Trustees without shareholder approval. Shareholders will be given at least 60 days’ advance notice of any change to a Portfolio’s investment objective.

### DESCRIPTION OF INVESTMENTS OF THE PORTFOLIOS OTHER THAN THE MUNICIPAL BOND ETF

The following is a description of the categories of investments that may be acquired by the Portfolios (other than the Municipal Bond ETF):

	Permissible Categories:
Core Fixed Income ETF	1-11
Short-Duration Fixed Income ETF	1-11
Inflation-Protected ETF	1,2,6,11

1. *U.S. Government Obligations*—Debt securities issued by the U.S. Treasury that are direct obligations of the U.S. Government, including bills, notes and bonds. These securities may also be purchased on a “when-issued” basis.

2. *U.S. Government Agency Obligations*—Issued or guaranteed by U.S. government-sponsored instrumentalities and federal agencies, which have different levels of credit support. The U.S. government agency obligations include, but are not limited to, securities issued by agencies and instrumentalities of the U.S. Government that are supported by the full faith and credit of the United States, such as the Federal Housing Administration and Ginnie Mae, including Ginnie Mae mortgage pass-through securities. Other securities issued by agencies and instrumentalities sponsored by the U.S. Government may be supported only by the issuer’s right to borrow from the U.S. Treasury, subject to certain limits, such as securities issued by Federal Home Loan Banks, or are supported only by the credit of such agencies, such as Freddie Mac and Fannie Mae, including their mortgage pass-through securities. These securities may also be purchased on a “when-issued” or “to-be-announced” basis, such as mortgage TBAs.

3. *Corporate Debt Obligations*—Corporate debt securities (e.g., bonds and debentures), which have received an investment grade rating by Moody’s, Fitch or S&P, or an equivalent rating assigned by another NRSRO, or, if unrated, have been determined by the Advisor to be of comparable quality.

4. *Bank Obligations*—Obligations of U.S. banks and savings and loan associations and dollar-denominated obligations of U.S. subsidiaries and branches of foreign banks, such as certificates of deposit (including

marketable variable rate certificates of deposit), time deposits and bankers' acceptances. Bank certificates of deposit will be acquired only from banks having assets in excess of \$1,000,000,000.

5. *Commercial Paper*—Rated, at the time of purchase, A3 or better by S&P or Prime3 or better by Moody's, or F3 or better by Fitch, or an equivalent rating assigned by another NRSRO, or, if unrated, issued by a corporation having an outstanding unsecured debt issue rated at least Baa3 by Moody's or BBB- by S&P or Fitch.

6. *Repurchase Agreements*—Instruments through which the Portfolios purchase securities ("underlying securities") from a bank, a registered U.S. government securities dealer, or such other counterparties with creditworthiness and other characteristics deemed appropriate by the Advisor, with an agreement by the seller to repurchase the securities at an agreed price, plus interest at a specified rate. The underlying securities will be limited to U.S. government and agency obligations described in (1) and (2) above. The Portfolios will not enter into a repurchase agreement with a duration of more than seven days if, as a result, more than 10% of the value of the Portfolio's total assets would be so invested. In addition, a repurchase agreement with a duration of more than seven days will be subject to a Portfolio's investment restriction on illiquid investments. The Portfolios also will only invest in repurchase agreements with banks, U.S. government securities, dealers, and/or other counterparties, as described above, that are approved by the Investment Committee of the Advisor. The Advisor will monitor the market value of the securities plus any accrued interest thereon so that they will at least equal the repurchase price.

7. *Foreign Government and Agency Obligations*—Bills, notes, bonds and other debt securities issued or guaranteed by foreign governments, or their authorities, agencies, instrumentalities or political subdivisions.

8. *Supranational Organization Obligations*—Debt securities of supranational organizations such as the European Investment Bank, the Inter-American Development Bank, or the World Bank, which are chartered to promote economic development.

9. *Foreign Issuer Obligations*—Debt securities of non-U.S. issuers that have received a rating of BBB- or better by S&P or Fitch or Baa3 or better by Moody's, or an equivalent rating assigned by another NRSRO, or, if unrated, have been determined by the Advisor to be of comparable quality.

10. *Eurodollar Obligations*—Debt securities of domestic or foreign issuers denominated in U.S. dollars but not trading in the United States.

11. *Money Market Funds*—The Portfolios may invest in affiliated and unaffiliated registered and unregistered money market funds. Investments in money market funds may involve a duplication of certain fees and expenses.

The categories of investments that may be acquired by each of the Portfolios may include both fixed and floating rate securities. Floating rate securities bear interest at rates that vary with prevailing market rates. Interest rate adjustments are made periodically (e.g., every six months), usually based on a money market index such as the Secured Overnight Financing Rate (SOFR) or the Treasury bill rate.

## **PORTFOLIO STRATEGIES**

In managing each Portfolio, the Advisor places priority on efficiently managing portfolio turnover and keeping trading costs low.

The Portfolios will be managed with a view to capturing expected credit premiums and expected term premiums. The term "expected credit premium" means the expected incremental return on investment for holding obligations considered to have greater credit risk than direct obligations of the U.S. Treasury, and "expected term premium" means the expected relative return on investment for holding securities having longer-term maturities as compared to securities having shorter-term maturities. At times when, in the Advisor's judgment, eligible foreign securities of the Portfolios, as applicable, do not offer expected term premiums that compare favorably with those offered by eligible U.S. Securities, such Portfolios will be invested primarily in the latter securities. The Advisor believes that expected credit premiums for the Portfolios (excluding the Municipal Bond ETF) are available largely through investment in commercial paper, certificates of deposit and corporate obligations. The Advisor believes that expected credit premiums for the Municipal Bond ETF are available largely through investment in investment grade municipal securities. In addition, in certain circumstances, the Municipal Bond ETF may favor securities issued by states with relatively lower or no income tax, to the extent consistent with its 80% policy. The holding period for assets of the Portfolios will be chosen with a view to maximizing

anticipated returns, net of trading costs. With respect to the Municipal Bond ETF, the Advisor may also consider potential realized and unrealized capital gains.

Duration, as discussed with respect to a Portfolio's investment policy regarding duration, is a measure of the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates. For example, when the level of interest rates increases by 0.10%, the price of a fixed income security or a portfolio of fixed income securities having a duration of five years generally will decrease by approximately 0.50%. Conversely, when the level of interest rates decreases by 0.10%, the price of a fixed income security or a portfolio of fixed income securities having a duration of five years generally will increase by approximately 0.50%. In general, greater sensitivity to changes in interest rates typically corresponds to higher volatility and higher risk. Securities are considered investment grade if the issuer has received a rating of BBB- or better by S&P or Fitch or Baa3 or better by Moody's or an equivalent rating assigned by another NRSRO.

Mortgage-backed securities represent an interest in a pool of mortgage loans that are packaged or "pooled" together for sale to investors. These mortgage loans are originated by banks and other financial institutions to finance purchases of homes and other real estate. Mortgage-backed securities may be issued as fixed-rate or adjustable-rate instruments. As the underlying mortgage loans are paid off, the Core Fixed Income ETF and Short-Duration Fixed Income ETF receive principal and interest payments. The Portfolios may purchase or sell mortgage-backed securities on a delayed delivery or forward commitment basis through the "to-be-announced" (TBA) market. A TBA transaction typically does not designate the actual security to be delivered and only includes an approximate principal amount. With TBA transactions, the specific securities to be delivered must meet specified terms and standards.

In making investment decisions for the Core Fixed Income ETF, the Advisor will increase or decrease exposure to intermediate-term securities depending on the expected term premium and also increase or decrease exposure to non-government securities depending on the expected credit risk premium.

The Short-Duration Fixed Income ETF may engage in frequent trading of portfolio securities and, therefore, are expected to have a high portfolio turnover rate. The rate of portfolio turnover will depend upon market and other conditions; it will not be a limiting factor when management believes that portfolio changes are appropriate. While the Portfolio generally acquires securities in principal transactions and, therefore, do not pay brokerage commissions, the spread between the bid and asked prices of a security may be considered to be a "cost" of trading. Such costs ordinarily increase with trading activity. However, securities ordinarily will be sold when, in the Advisor's judgment, the monthly return of the Portfolio will be increased as a result of portfolio transactions after taking into account the cost of trading. It is anticipated that short-term instruments will be acquired in the primary and secondary markets. A high portfolio turnover rate may have negative tax consequences to shareholders and may result in increased trading costs.

The Inflation-Protected ETF seeks to achieve its investment objective by investing in a universe of inflation-protected securities that are structured to provide returns linked to the rate of inflation over the long-term. The Portfolio ordinarily invests in inflation-protected securities issued by the U.S. Government and its agencies and instrumentalities and the credit quality of such inflation-protected securities will be that of such applicable U.S. Government, agency or instrumentality issuer.

Inflation-protected securities (also known as inflation-indexed securities) are securities whose principal and/or interest payments are adjusted for inflation, unlike conventional debt securities that make fixed principal and interest payments. Inflation-protected securities include Treasury Inflation-Protected Securities ("TIPS"), which are securities issued by the U.S. Treasury. The principal value of TIPS is adjusted for inflation (payable at maturity) and the semi-annual interest payments by TIPS equal a fixed percentage of the inflation-adjusted principal amount. These inflation adjustments are based upon the Consumer Price Index for Urban Consumers (CPI-U). The original principal value of TIPS is guaranteed. At maturity, TIPS are redeemed at the greater of their inflation-adjusted principal or par amount at original issue. Other types of inflation-protected securities may use other methods to adjust for inflation and other measures of inflation. In addition, inflation-protected securities issued by entities other than the U.S. Treasury may not provide a guarantee of principal value at maturity.

The Municipal Bond ETF may also invest in exchange-traded funds (ETFs) to gain exposure to the municipal bond market pending investment in municipal bonds. The Portfolio may also invest in affiliated and unaffiliated

registered and unregistered money market funds. Investments in ETFs and money market funds may involve a duplication of certain fees and expenses.

The Municipal Bond ETF may also purchase pre-refunded municipal securities. Pre-refunded municipal securities are tax-exempt bonds that have been redeemed on a call date prior to the final maturity of principal, or “escrowed-to-maturity bonds,” that have been refunded prior to the final maturity of principal and remain outstanding in the municipal market. The payment of principal and interest of the pre-refunded municipal securities held by the Municipal Bond ETF is funded from securities in a designated escrow account that holds U.S. Treasury securities or other obligations of the U.S. Government (including its agencies and instrumentalities). When considering the credit quality of a pre-refunded municipal security, the Advisor will “look through” to the credit quality of the securities held in escrow.

In attempting to respond to adverse market, economic, political, or other conditions, the Portfolios may, from time to time, invest its assets in a temporary defensive manner that is inconsistent with the Portfolios’ principal investment strategies. In these circumstances, the Portfolios may be unable to achieve their investment objectives.

#### ADDITIONAL INFORMATION REGARDING INVESTMENT RISKS

Because the value of your investment in a Portfolio will fluctuate, there is the risk that you will lose money. An investment in a Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following is a description of principal risks of investing in the Portfolios.

Risk	Core Fixed Income ETF	Short-Duration Fixed Income ETF	Inflation-Protected ETF	Municipal Bond ETF
Call Risk	X	X		X
Credit Risk	X	X	X	X
Cyber Security Risk	X	X	X	X
Derivatives Risk	X	X	X	X
Foreign Government Debt Risk	X	X

Municipal Securities Risk				X
Operational Risk	X	X	X	X
Premium/Discount Risk	X	X	X	X
Risks of Investing for Inflation Protection			X	
Securities Lending Risk	X	X	X	
Tax Liability Risk				X

**Call Risk:** Call risk is the risk that an issuer may exercise its right to redeem a fixed income security earlier than its maturity date. Issuers may call outstanding securities prior to their maturity for a number of reasons (e.g., declining interest rates changes in credit spreads and improvements in the issuer's credit quality). If an issuer calls a security that the Portfolio has invested in, the Portfolio may not recoup the full amount of its initial investment and may be forced to reinvest in lower-yielding securities, securities with greater credit risks or securities with other, less favorable features.

**Credit Risk:** Credit risk is the risk that the issuer of a security may be unable to make interest payments and/or repay principal when due. A downgrade to an issuer's credit rating or a perceived change in an issuer's financial strength may affect a security's value, and thus, impact the Portfolio's performance. Government agency obligations have different levels of credit support and, therefore, different degrees of credit risk. Securities issued by agencies and instrumentalities of the U.S. Government that are supported by the full faith and credit of the United States, such as the Federal Housing Administration and Ginnie Mae, present little credit risk. Other securities issued by agencies and instrumentalities sponsored by the U.S. Government, that are supported only by the issuer's right to borrow from the U.S. Treasury, subject to certain limitations, and securities issued by agencies and instrumentalities sponsored by the U.S. Government that are sponsored by the credit of the issuing agencies, such as Freddie Mac and Fannie Mae, are subject to a greater degree of credit risk. U.S. government agency securities issued or guaranteed by the credit of the agency may still involve a risk of nonpayment of principal and/or interest. Credit risk is greater for fixed income securities with ratings below investment grade (e.g., BB+ or below by S&P or Fitch, or Ba1 or below by Moody's). Fixed income securities that are below investment grade involve high credit risk and are considered speculative. Below investment grade fixed income securities may also fluctuate in value more than higher quality fixed income securities and, during periods of market volatility, may be more difficult to sell at the time and price the Portfolio desires.

**Credit Risk (Municipal Bond ETF):** Credit risk is the risk that the issuer of a security, including a governmental entity, may be unable to make interest payments and/or repay principal when due. A downgrade to an issuer's credit rating or a perceived change in an issuer's financial strength may affect a security's value, and thus, impact the Portfolio's performance. The ability of a municipal securities issuer to make payments could be affected by litigation, legislation or other political events or the bankruptcy of the issuer. Credit risk is greater for fixed income securities with ratings below investment grade (e.g., BB+ or below by S&P or Fitch, or Ba1 or below by Moody's). Fixed income securities that are below investment grade involve high credit risk and are considered speculative. Below investment grade fixed income securities may also fluctuate in value more than higher quality fixed income securities and, during periods of market volatility, may be more difficult to sell at the time and price the Portfolio desires.

**Cyber Security Risk:** The Portfolio's and its service providers' use of internet, technology and information systems may expose the Portfolio to potential risks linked to cyber security breaches of those technological or information systems. Cyber security breaches, amongst other things, could allow an unauthorized party to gain access to proprietary information, customer data, or fund assets, or cause the Portfolio and/or its service providers to suffer data corruption or lose operational functionality.

**Derivatives Risk:** Derivatives are instruments, such as swaps, futures contracts, and options thereon, and foreign currency forward contracts, whose value is derived from that of other assets, rates or indices. Derivatives can be used for hedging (attempting to reduce risk by offsetting one investment position with another) or non-hedging purposes. Hedging with derivatives may increase expenses, and there is no guarantee that a hedging strategy will work. While hedging can reduce or eliminate losses, it can also reduce or eliminate gains or cause losses if the market moves in a manner different from that anticipated by the Portfolio or if the cost of the derivative outweighs the benefit of the hedge. The use of derivatives for non-hedging purposes may be considered to carry more risk than other types of investments. When the Portfolio uses derivatives, the Portfolio will be directly exposed to the risks of those derivatives. Derivatives expose the Portfolio to counterparty risk (the risk that the derivative counterparty will not fulfill its contractual obligations), including credit risk of the derivative counterparty, and settlement risk (the risk faced when one party to a transaction has performed its obligations under a contract but has not yet received value from its counterparty). The possible lack of a liquid secondary market for derivatives and the resulting inability of the Portfolio to sell or otherwise close a derivatives position could expose the Portfolio to losses and could make derivatives more difficult for the Portfolio to value accurately. Some derivatives are more sensitive to interest rate changes and market price fluctuations than other securities. The Portfolio could also suffer losses related to its derivatives positions as a result of unanticipated

market movements, which losses are potentially unlimited. The Advisor may not be able to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors, which could cause the Portfolio's derivatives positions to lose value. Valuation of derivatives may also be more difficult in times of market turmoil since many investors and market makers may be reluctant to purchase derivatives or quote prices for them. Changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index, and the Portfolio could lose more than the principal amount invested. Additional risks are associated with the use of swaps including counterparty and credit risk (the risk that the other party to a swap agreement will not fulfill its contractual obligations, whether because of bankruptcy or other default) and liquidity risk (the possible lack of a secondary market for the swap agreement). Credit risk increases when the Portfolio is the seller of swaps and counterparty risk increases when the Portfolio is a buyer of swaps. In addition, where the Portfolio is the seller of swaps, it may be required to liquidate portfolio securities at inopportune times in order to meet payment obligations. Swaps may be illiquid or difficult to value.

**Foreign Government Debt Risk:** The risk that: (a) the governmental entity that controls the repayment of government debt may not be willing or able to repay the principal and/or to pay the interest when it becomes due, due to factors such as political considerations, the relative size of the governmental entity's debt position in relation to the economy, cash flow problems, insufficient foreign currency reserves, the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies, and/or other national economic factors; (b) governments may default on their debt securities, which may require holders of such securities to participate in debt rescheduling; and (c) there is no legal or bankruptcy process by which defaulted government debt may be collected in whole or in part.

**Foreign Securities and Currencies Risk:** Foreign securities prices may decline or fluctuate because of: (a) economic or political actions of foreign governments, and/or (b) less regulated or liquid securities markets. Investors holding these securities may also be exposed to foreign currency risk (the possibility that foreign currency will fluctuate in value against the U.S. dollar or that a foreign government will convert, or be forced to convert, its currency to another currency, changing its value against the U.S. dollar).

Foreign issuers may not be subject to uniform accounting, auditing and financial reporting standards and there may be less publicly available financial and other information about such issuers, comparable to U.S. issuers. Certain countries' legal institutions, financial markets, and services are less developed than those in the U.S. or other major economies. The Portfolio may have greater difficulty voting proxies, exercising shareholder rights, securing dividends and obtaining information regarding corporate actions on a timely basis, pursuing legal remedies, and obtaining judgments with respect to foreign investments in foreign courts than with respect to domestic issuers in U.S. courts.

**Income Risk:** Income risk is the risk that falling interest rates will cause the Portfolio's income to decline because, among other reasons, the proceeds from maturing short-term securities in its portfolio may be reinvested in lower-yielding securities.

**Inflation-Protected Securities Interest Rate Risk:** Inflation-protected securities may react differently from other fixed income securities to changes in interest rates. Because interest rates on inflation-protected securities are adjusted for inflation, the values of these securities are not materially affected by inflation expectations. Therefore, the value of inflation-protected securities are anticipated to change in response to changes in "real" interest rates, which represent nominal (stated) interest rates reduced by the expected impact of inflation. Generally, the value of an inflation-protected security will fall when real interest rates rise and will rise when real interest rates fall.

**Inflation-Protected Securities Tax Risk:** Any increase in the principal amount of an inflation-protected security may be included for tax purposes in the Portfolio's gross income, even though no cash attributable to such gross income has been received by the Portfolio. In such event, the Portfolio may be required to make annual gross distributions to shareholders that exceed the cash it has otherwise received. In order to pay such distributions, the Portfolio may be required to raise cash by selling its investments. The sale of such investments could result in capital gains to the Portfolio and additional capital gain distributions to shareholders. In addition, adjustments during the taxable year for deflation to an inflation-indexed bond held by the Portfolio may cause amounts previously distributed to shareholders in the taxable year as income to be characterized as a return of capital.

**Interest Rate Risk:** Fixed income securities are subject to interest rate risk because the prices of fixed income securities tend to move in the opposite direction of interest rates. When interest rates rise, fixed income security prices fall. During periods of very low or negative interest rates, the Portfolio may be subject to a greater risk of rising interest rates. When interest rates fall, fixed income security prices rise. In general, fixed income securities with longer maturities are more sensitive to changes in interest rates.

**International Closed Market Trading Risk:** To the extent that the underlying securities held by the Portfolio trade on an exchange that is closed when the securities exchange on which the Portfolio shares list and trade is open, there may be market uncertainty about the stale security pricing (i.e., the last quote from its closed foreign market) resulting in premiums or discounts to NAV that may be greater than those experienced by other ETFs.

**Large Shareholder Risk:** Certain large shareholders, including other funds or accounts advised by the Advisor, may from time to time own a substantial amount of the Portfolio's shares. In addition, a third party investor, the Advisor, an authorized participant, a lead market maker, or another entity may invest in the Portfolio and hold its investment for a limited period of time solely to facilitate commencement of the Portfolio or to facilitate the Portfolio's achieving a specified size or scale. There can be no assurance that any large shareholder would not redeem its investment. Dispositions of a large number of shares by these shareholders may adversely affect the Portfolio's liquidity and net assets to the extent such transactions are executed directly with the Portfolio in the form of redemptions through an authorized participant, rather than executed in the secondary market. These redemptions may also force the Portfolio to sell portfolio securities when it might not otherwise do so, which may negatively impact the Portfolio's NAV and increase the Portfolio's brokerage costs. To the extent these large shareholders transact in shares on the secondary market, such transactions may account for a large percentage of the trading volume on listing exchange and may, therefore, have a material upward or downward effect on the market price of the shares.

**Liquidity Risk:** Liquidity risk exists when particular portfolio investments are difficult to purchase or sell. To the extent that the Portfolio holds illiquid investments, the Portfolio's performance may be reduced due to an inability to sell the investments at opportune prices or times. Liquid portfolio investments may become illiquid or less liquid after purchase by the Portfolio due to low trading volume, adverse investor perceptions and/or other market developments. Liquidity risk includes the risk that the Portfolio will experience significant net redemptions at a time when it cannot find willing buyers for its portfolio securities or can only sell its portfolio securities at a material loss or at increased costs. Liquidity risk can be more pronounced in periods of market turmoil or in situations where ownership of shares of the Portfolio are concentrated in one or a few investors.

**Market Risk:** Even a long-term investment approach cannot guarantee a profit. Economic, political, and issuer-specific events will cause the value of securities, and the Portfolio that owns them, to rise or fall.

The coronavirus (COVID-19) pandemic has resulted, at times, in market closures, market volatility, liquidity constraints and increased trading costs. Efforts to contain the spread of COVID-19 have resulted in global travel restrictions and disruptions of healthcare systems, business operations and supply chains, layoffs, reduced consumer demand, defaults and credit rating downgrades, and other significant economic impacts. The effects of COVID-19 have impacted global economic activity and may heighten pre-existing political, social and economic risks, domestically or globally. The full impact and duration of the COVID-19 pandemic (or other future epidemics or pandemics) are unpredictable and may adversely affect the Portfolio's performance.

**Market Trading Risk:** Although shares of the Portfolio are listed for trading on one or more stock exchanges, there can be no assurance that an active trading market for such shares will develop or be maintained. There are no obligations of market makers to make a market in the Portfolio's shares or of an authorized participant to submit purchase or redemption orders for Creation Units. Decisions by market makers or authorized participants to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying value of the Portfolio's portfolio securities and the Portfolio's market price. This reduced effectiveness could result in Portfolio shares trading at a premium or discount to its NAV and also greater than normal intraday bid/ask spreads. Additionally, in stressed market conditions, the market for the Portfolio's shares may become less liquid in response to deteriorating liquidity in the markets for the Portfolio's portfolio holdings, which may cause a significant variance in the market price of the Portfolio's shares and their underlying value as well as an increase in the Portfolio's bid-ask spread.

There can be no assurance that the Portfolio's shares will continue to trade on a stock exchange or in any market or that the Portfolio's shares will continue to meet the requirements for listing or trading on any exchange or in any market, or that such requirements will remain unchanged. Secondary market trading in Portfolio shares may be halted by a stock exchange because of market conditions or other reasons. In addition, trading in Portfolio shares on a stock exchange or in any market may be subject to trading halts caused by extraordinary market volatility pursuant to "circuit breaker" rules on the stock exchange or market.

During a "flash crash," the market prices of the Portfolio's shares may decline suddenly and significantly. Such a decline may not reflect the performance of the portfolio securities held by the Portfolio. Flash crashes may cause authorized participants and other market makers to limit or cease trading in the Portfolio's shares for temporary or longer periods. Shareholders could suffer significant losses to the extent that they sell shares at these temporarily low market prices. Shares of the Portfolio, similar to shares of other issuers listed on a stock exchange, may be sold short and are therefore subject to the risk of increased volatility associated with short selling.

**Mortgage-Backed Securities Risk:** Mortgage-backed securities represent interests in "pools" of mortgages and often involve risks that are different from or potentially more significant than risks associated with other types of debt instruments. Mortgage securities differ from typical debt securities in that principal is not paid back at maturity, but rather periodically over the life of the security. The Portfolio may receive unscheduled payments of principal due to voluntary prepayments, refinancings or foreclosures on the underlying mortgage loans. When interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the returns of the Portfolio because it may have to reinvest that money at the lower prevailing interest rates. As a result, mortgage securities may be less effective than some other types of debt securities as a means of securing long-term interest rates and may have less potential for capital appreciation during periods of falling interest rates. Conversely, in a period of rising interest rates, the Portfolio may exhibit additional volatility since rising interest rates tend to extend the duration of fixed rate mortgage-related securities, making them more sensitive to changes in interest rates. As interest rates rise mortgage borrowers are less likely to exercise prepayment options, which may reduce the value of these securities and potentially cause the Portfolio to lose money. This is known as extension risk.

**Municipal Project-Specific Risk:** The risk that the Portfolio may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in municipal securities that finance similar types of projects in a segment of the municipal bond market (such as education, health care, housing, education, utilities or transportation) or industrial development bonds. A change that affects one project in a particular segment of the market, such as proposed legislation on the financing of the project, a shortage of the materials needed for the project, or a declining need for the project, would likely affect all similar projects, thereby increasing market risk.

**Municipal Securities Risk:** The risk of a municipal security generally depends on the financial and credit status of the issuer. Municipal securities can be significantly affected by political, regulatory or economic changes, including changes made in the law after issuance of the securities, as well as uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders, including in connection with an issuer's insolvency.

**Operational Risk:** Operational risks include human error, changes in personnel, system changes, faults in communication, and failures in systems, technology, or processes. Various operational events or circumstances are outside the Advisor's control, including instances at third parties. The Portfolio and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

**Premium/Discount Risk:** Shares of the Portfolio may trade at prices other than NAV. Shares of the Portfolio trade on stock exchanges at prices at, above or below their most recent NAV. The NAV of the Portfolio is calculated at the end of each business day and fluctuates with changes in the market value of the Portfolio's holdings since the most recent calculation. The trading prices of the Portfolio's shares fluctuate continuously throughout trading hours based on market supply and demand rather than NAV. As a result, the trading prices of the Portfolio's shares may deviate significantly from NAV during periods of market volatility.

Any of these factors, among others, may lead to the Portfolio's shares trading at a premium or discount to NAV. Thus, you may pay more (or less) than NAV when you buy shares of the Portfolio in the secondary market, and you may receive less (or more) than NAV when you sell those shares in the secondary market. The Advisor cannot predict whether shares will trade above (premium), below (discount) or at NAV. However, because shares can be created and redeemed in Creation Units at NAV, the Advisor believes that large discounts or premiums to the NAV of the Portfolio are not likely to be sustained over the long-term. While the creation/redemption feature is designed to make it likely that the Portfolio's shares normally will trade on stock exchanges at prices close to the Portfolio's next calculated NAV, exchange prices are not expected to correlate exactly with the Portfolio's NAV due to timing reasons as well as market supply and demand factors. In addition, disruptions to creations and redemptions or extreme market volatility may result in trading prices for shares of the Portfolio that differ significantly from its NAV.

**Risks of Investing for Inflation Protection:** Because the interest and/or principal payments on an inflation-protected security are adjusted periodically for changes in inflation, the income distributed by the Portfolio may be irregular. Although the U.S. Treasury guarantees to pay at maturity at least the original face value of any inflation-protected securities the Treasury issues, other issuers may not offer the same guarantee. Also, inflation-protected securities, including those issued by the U.S. Treasury, are not protected against deflation. As a result, in a period of deflation, the inflation-protected securities held by the Portfolio may not pay any income and the Portfolio may suffer a loss during such periods. While inflation-protected securities are expected to be protected from long-term inflationary trends, short-term increases in inflation may lead to a decline in the Portfolio's value. If interest rates rise due to reasons other than inflation, the Portfolio's investment in these securities may not be protected to the extent that the increase is not reflected in the securities' inflation measures. In addition, positive adjustments to principal generally will result in taxable income to the Portfolio at the time of such adjustments (which generally would be distributed by the Portfolio as part of its taxable dividends), even though the principal amount is not paid until maturity. The current market value of inflation-protected securities is not guaranteed and will fluctuate.

**Securities Lending Risk:** Securities lending involves the risk that the borrower may fail to return the securities in a timely manner or at all. As a result, the Portfolio may lose money and there may be a delay in recovering the loaned securities. The Portfolio could also lose money if it does not recover the securities and/or the value of the collateral falls, including the value of investments made with cash collateral. Securities lending also may have certain adverse tax consequences.

**Tax Liability Risk:** Tax liability risk is the risk that distributions by the Portfolio become taxable to shareholders due to noncompliant conduct by a municipal bond issuer, unfavorable changes in federal or state tax laws, or adverse interpretations of tax laws by the Internal Revenue Service or state tax authorities or other factors. Such adverse interpretations or actions could cause interest from a security to become taxable, possibly retroactively, subjecting shareholders to increased tax liability. In addition, such adverse interpretations or actions could cause the value of a security, and therefore, the value of the Portfolio's shares, to decline. Additionally, if the Portfolio's use of derivative instruments for hedging and non-hedging purposes cause the Portfolio to invest less than 50% of its assets in municipal securities in any quarter, which the Portfolio does not anticipate, the Portfolio may fail to qualify to pay exempt-interest dividends to its shareholders, resulting in the distributions by the Portfolio becoming taxable to shareholders as ordinary income.

## Other Information

### COMMODITY POOL OPERATOR EXEMPTION

Each Portfolio is operated by a person that has claimed an exclusion from the definition of the term "commodity pool operator" under the Commodity Exchange Act ("CEA") with respect to the Portfolio, and, therefore, such person is not subject to registration or regulation as a pool operator under the CEA with respect to the Portfolio.

## Securities Loans

Each Portfolio that is authorized to lend securities may lend such securities to qualified brokers, dealers, banks and other financial institutions for the purpose of earning additional income. While a Portfolio may earn additional income from lending securities, such activity is incidental to the investment objective of the Portfolio. The value of securities loaned may not exceed 33 1/3% of the value of the Portfolio's total assets, which includes the value of collateral received. To the extent the Portfolio loans a portion of its securities, the Portfolio will receive collateral consisting generally of cash or U.S. government securities. Collateral received will be maintained by marking to market daily and (i) in an amount equal to at least 100% of the current market value of the loaned securities with respect to securities of the U.S. Government or its agencies, (ii) in an amount generally equal to 102% of the current market value of the loaned securities with respect to U.S. securities, and (iii) in an amount generally equal to 105% of the current market value of the loaned securities with respect to foreign securities. Subject to its stated investment policies, a Portfolio will generally invest the cash collateral received for the loaned securities in The DFA Short Term Investment Fund (the "Money Market Series"), an affiliated registered money market fund advised by the Advisor for which the Advisor receives a management fee of 0.05% of the average daily net assets of the Money Market Series. A Portfolio may also invest such collateral in securities of the U.S. Government or its agencies, repurchase agreements collateralized by securities of the U.S. Government or its agencies, and unaffiliated registered and unregistered money market funds. For purposes of this paragraph, agencies include both agency debentures and agency mortgage-backed securities.

In addition, a Portfolio will be able to terminate the loan at any time and will receive reasonable interest on the loan, as well as amounts equal to any dividends, interest or other distributions on the loaned securities. However, dividend income received from loaned securities may not be eligible to be taxed at qualified dividend income rates. See each Portfolio's Statement of Additional Information ("SAI") for a further discussion of the tax consequences related to securities lending. A Portfolio will be entitled to recall a loaned security in time to vote proxies or otherwise obtain rights to vote proxies of loaned securities if the Portfolio knows that a material event will occur. In the event of the bankruptcy of the borrower, a Portfolio could experience delay in recovering the loaned securities or only recover cash or a security of equivalent value. See "**Principal Risks—Securities Lending Risk**" for a discussion of the risks related to securities lending.

## Securities Lending Revenue

During the fiscal year ended October 31, 2022, the following Portfolios received the following net revenues from a securities lending program (see "**SECURITIES LOANS**"), which constituted a percentage of the average daily net assets of the Portfolio:

Portfolio	Net Revenue*	Percentage of Net Assets
Core Fixed Income ETF	\$31,664	0.00%
Short-Duration Fixed Income ETF	\$25,810	0.00%

\* The amounts included in the table above may differ from the amounts disclosed in the Portfolios' annual reports due to timing differences, reconciliations, and certain other adjustments.

## Management of the Trust

The Advisor serves as investment advisor to each of the Portfolios. Pursuant to an Investment Management Agreement with each Portfolio, the Advisor is responsible for the management of their respective assets. The Portfolios are managed using a team approach. The investment team includes the Investment Committee of the Advisor, portfolio managers and trading personnel.

The Investment Committee is composed primarily of certain officers and directors of the Advisor who are appointed annually. As of the date of this Prospectus, the Investment Committee has fourteen members.

Investment strategies for all Portfolios are set by the Investment Committee, which meets on a regular basis and also as needed to consider investment issues. The Investment Committee also sets and reviews all investment related policies and procedures and approves any changes in regards to approved countries, security types and brokers.

In accordance with the team approach used to manage the Portfolios, the portfolio managers and portfolio traders implement the policies and procedures established by the Investment Committee. The portfolio managers and portfolio traders also make daily investment decisions regarding the Portfolios based on the parameters established by the Investment Committee. The individuals named in a Portfolio's **"INVESTMENT ADVISOR/PORTFOLIO MANAGEMENT"** section coordinate the efforts of all other portfolio managers or trading personnel with respect to the day to day management of such Portfolio.

Ms. Huebel is Head of Responsible Investment, North America, and a Vice President and Senior Portfolio Manager of the Advisor. Ms. Huebel holds an MS from Kansas State University, an MA from the University of California-Santa Barbara, and a BS from Texas State University. Ms. Huebel joined the Advisor in 2012, has been a portfolio manager since 2015, and has been responsible for the Short-Duration Fixed Income ETF since its inception.

Mr. Hutchison is a Vice President and Senior Portfolio Manager of the Advisor. Mr. Hutchison holds an MBA from Drake University and a BBA from Texas Tech University. Mr. Hutchison joined the Advisor in 2006, has been a portfolio manager since 2013, and has been responsible for the Inflation-Protected ETF since its inception.

Mr. Kolerich is Head of Fixed Income, Americas, a member of the Investment Committee, Vice President, and Senior Portfolio Manager of the Advisor. Mr. Kolerich has an MBA from the University of Chicago Booth School of Business and a BS from Northern Illinois University. Mr. Kolerich joined the Advisor as a portfolio manager in 2001 and has been responsible for each Portfolio since its inception.

Mr. Meldau is a Vice President and Senior Portfolio Manager of the Advisor. Mr. Meldau holds an MBA from Wake Forest University and a BSBA from Appalachian State University. Mr. Meldau joined the Advisor in 2011, has been a portfolio manager since 2011, and has been responsible for the Municipal Bond ETF since its inception.

Mr. Plecha is Global Head of Fixed Income Portfolio Management, a member of the Investment Committee, Vice President, and Senior Portfolio Manager of the Advisor. Mr. Plecha received his BS from the University of Michigan at Ann Arbor in 1983 and his MBA from the University of California at Los Angeles in 1987. Mr. Plecha has been a portfolio manager since 1989 and has been responsible for each Portfolio since its inception.

Mr. Shao is a Vice President and Senior Portfolio Manager of the Advisor. Mr. Shao holds an MA from the University of California at Los Angeles and a BS from Columbia University. Mr. Shao joined the Advisor in 2006, has been a portfolio manager since 2011, and has been responsible for the Core Fixed Income ETF since its inception.

The Portfolios' SAI provides information about each portfolio manager's compensation, other accounts managed by the portfolio manager, and the portfolio manager's ownership of Portfolio shares.

The Advisor, Dimensional Fund Advisors Ltd. ("DFAL") and DFA Australia Limited ("DFA Australia"), provide the Portfolios with a trading department and selects brokers and dealers to effect securities transactions. Securities transactions are placed with a view to obtaining best price and execution. The Advisor may pay compensation, out of the Advisor's profits and not as an additional charge to a Portfolio, to financial intermediaries to support the sale of Portfolio shares. The Advisor's address is 6300 Bee Cave Road, Building One, Austin, TX 78746. A discussion regarding the basis for the Board of Trustees (the "Board") approving the Investment Management Agreements and Sub-Advisory Agreements with respect to the Portfolios is available in the semi-annual report for the Portfolios for the fiscal period ending April 30, 2022.

The Advisor has been engaged in the business of providing investment management services since May 1981. The Advisor is currently organized as a Delaware limited partnership and is controlled and operated by its general partner, Dimensional Holdings Inc., a Delaware corporation. The Advisor controls DFAL and DFA

Australia. As of January 31, 2023, assets under management for all Dimensional affiliated advisors totaled approximately \$626 billion.

The Agreement and Declaration of Trust (the “Declaration”) provides that by virtue of becoming a shareholder of the Trust, each shareholder shall be held expressly to have agreed to be bound by the provisions of the Declaration. However, shareholders should be aware that they cannot waive their rights under the federal securities laws. The Declaration provides a detailed process for the bringing of derivative actions by shareholders for claims other than federal securities law claims beyond the process otherwise required by law. This derivative actions process is intended to permit legitimate inquiries and claims while avoiding the time, expense, distraction, and other harm that can be caused to a Portfolio or its shareholders as a result of spurious shareholder demands and derivative actions. Prior to bringing a derivative action, a demand by the complaining shareholder must first be made on the Trustees. The Declaration details conditions that must be met with respect to the demand. Following receipt of the demand, the Trustees must be afforded a reasonable amount of time to investigate and consider the demand. The Trustees will be entitled to retain counsel or other advisors in considering the merits of the request and shall require an undertaking by the shareholders making such request to reimburse the Trust for the expense of any such advisors in the event that the Trustees determine not to bring such action. The Trust’s process for bringing derivative suits may be more restrictive than other investment companies. The process for derivative actions for the Trust also may make it more expensive for a shareholder to bring a suit than if the shareholder was not required to follow such a process.

The Declaration also requires that actions by shareholders against a Portfolio be brought only in a certain federal court in Texas, or if not permitted to be brought in federal court, then in the Court of Chancery of the State of Delaware as required by applicable law, or the Superior Court of Delaware, (the “Exclusive Jurisdictions”) and that the right to jury trial be waived to the fullest extent permitted by law. Other investment companies may not be subject to similar restrictions. In addition, the designation of Exclusive Jurisdictions may make it more expensive for a shareholder to bring a suit than if the shareholder was permitted to select another jurisdiction. Also, the designation of Exclusive Jurisdictions and the waiver of jury trials limit a shareholder’s ability to litigate a claim in the jurisdiction and in a manner that may be more favorable to the shareholder. A court may choose not to enforce these provisions of the Declaration.

#### MANAGEMENT FEES

The “Annual Fund Operating Expenses” table describes the fees incurred by the Inflation-Protected ETF and Municipal Bond ETF for the services provided by the Advisor for the fiscal year ended October 31, 2022. The “Management Fee” listed in the “Annual Fund Operating Expenses” table for the Inflation-Protected ETF and Municipal Bond ETF provides the investment management fee that was payable by the respective Portfolio to the Advisor. The Advisor, not the Portfolios, compensates the sub-advisors.

The following table describes the management fee paid to the Advisor by the Core Fixed Income ETF and Short-Duration Fixed Income ETF effective as of February 28, 2023 as a result of a decrease in the management fee:

Portfolio	Previous Management Fee	Management Fee Effective February 28, 2023
Core Fixed Income ETF	0.17%	0.16%
Short-Duration Fixed Income ETF	0.16%	0.15%

#### Sub-Advisors

The Advisor has entered into Sub-Advisory Agreements with DFAL and DFA Australia, respectively, with respect to each Portfolio. Pursuant to the terms of each Sub-Advisory Agreement, DFAL and DFA Australia each have the authority and responsibility to select brokers or dealers to execute securities transactions for the Portfolio. Each Sub-Advisor’s duties include the maintenance of a trading desk and the determination of the best and most efficient means of executing securities transactions. At least semi-annually, the Advisor will review the holdings of a Portfolio and review the trading process and the execution of securities transactions. The Advisor is responsible for determining those securities that are eligible for purchase and sale by a Portfolio and may delegate this task,

subject to its own review, to DFAL and DFA Australia. DFAL and DFA Australia maintain and furnish to the Advisor information and reports on securities of companies in certain markets, including recommendations of securities to be added to the securities that are eligible for purchase by a Portfolio, as well as making recommendations and elections on corporate actions. The Advisor controls DFAL and DFA Australia. DFA Australia has been a U.S. federally registered investment advisor since 1994 and is located at Level 43 Gateway, 1 Macquarie Place, Sydney, New South Wales 2000, Australia. DFAL has been a U.S. federally registered investment advisor since 1991 and is located at 20 Triton Street, Regent's Place, London NW13BF, United Kingdom.

### **Manager of Managers Structure**

The Advisor and the Trust have received an exemptive order from the Securities and Exchange Commission (the "SEC") for a manager of managers structure that allows the Advisor to appoint, remove or change Dimensional Wholly-Owned Sub-advisors (defined below), and enter into, amend and terminate sub-advisory agreements with Dimensional Wholly-Owned Sub-advisors, without prior shareholder approval, but subject to Board approval. A "Dimensional Wholly-Owned Sub-advisor" includes (1) sub-advisors that are wholly-owned by the Advisor (i.e., an indirect or direct "wholly-owned subsidiary" (as such term is defined in the Investment Company Act of 1940 (the "1940 Act")) of the Advisor, or (2) a sister company of the Advisor that is an indirect or direct "wholly-owned subsidiary" (as such term is defined in the 1940 Act) of the same company that, indirectly or directly, wholly owns the Advisor ("Dimensional Wholly-Owned Sub-advisors"). The Board only will approve a change with respect to sub-advisors if the Trustees conclude that such arrangements would be in the best interests of the shareholders of a Portfolio. If a new Dimensional Wholly-Owned Sub-advisor is hired for a Portfolio, shareholders will receive information about the new sub-advisor within 90 days of the change. The exemptive order allows greater flexibility for the Advisor to utilize, if desirable, personnel throughout the worldwide organization enabling a Portfolio to operate more efficiently. The Advisor will not hire unaffiliated sub-advisors without prior shareholder approval and did not request the ability to do so in its application to the SEC for an exemptive order to allow the manager of managers structure.

The use of the manager of managers structure with respect to a Portfolio is subject to certain conditions set forth in the SEC exemptive order. Under the manager of managers structure, the Advisor has the ultimate responsibility, subject to oversight by the Board, to oversee the Dimensional Wholly-Owned Sub-advisors and recommend their hiring, termination and replacement. The Advisor will provide general management services to a Portfolio, including overall supervisory responsibility for the general management and investment of the Portfolio's assets. Subject to review and approval of the Board, the Advisor will (a) set a Portfolio's overall investment strategies, (b) evaluate, select, and recommend Dimensional Wholly-Owned Sub-advisors to manage all or a portion of a Portfolio's assets, and (c) implement procedures reasonably designed to ensure that Dimensional Wholly-Owned Sub-advisors comply with a Portfolio's investment objective, policies and restrictions. Subject to review by the Board, the Advisor will (a) when appropriate, allocate and reallocate a Portfolio's assets among multiple Dimensional Wholly-Owned Sub-advisors; and (b) monitor and evaluate the performance of Dimensional Wholly-Owned Sub-advisors.

### **FEE WAIVER AND EXPENSE ASSUMPTION AGREEMENTS**

Pursuant to a Fee Waiver and/or Expense Assumption Agreement for each Portfolio, the Advisor has agreed to waive certain fees and in certain instances, assume certain expenses of the Portfolio, as described below. The Fee Waiver and/or Expense Assumption Agreement will remain in effect through February 28, 2024, and may only be terminated by the Trust's Board of Trustees prior to that date. The Fee Waiver and/or Expense Assumption Agreement shall continue in effect from year to year thereafter unless terminated by the Trust or the Advisor. With respect to each Fee Waiver and/or Expense Assumption Agreement, prior year waived fees and/or assumed expenses can be recaptured only if the expense ratio following such recapture would be less than the expense cap that was in place when such prior year fees were waived and/or expenses assumed, and less than the current expense cap in place for the Portfolio. The Portfolio is not obligated to reimburse the Advisor for fees previously waived or expenses previously assumed by the Advisor more than thirty-six months before the date of such reimbursement.

The Advisor has contractually agreed to waive all or a portion of its management fee and assume the ordinary operating expenses of each of the Portfolios (excluding the expenses that the Portfolio incurs indirectly through

its investment in other investment companies) ("Portfolio Expenses") to the extent necessary to limit the Portfolio Expenses of each Portfolio, on an annualized basis, to the rates listed below as a percentage of the respective Portfolio's average net assets (the "Expense Limitation Amount"). At any time that the Portfolio Expenses of a Portfolio are less than the Expense Limitation Amount for the Portfolio, the Advisor retains the right to recover any fees previously waived and/or expenses previously assumed to the extent that such recovery will not cause the annualized Portfolio Expenses for such Portfolio to exceed the applicable Expense Limitation Amount identified below.

Portfolio	Expense Limitation Amount
Dimensional Core Fixed Income ETF	0.17%
Dimensional Short-Duration Fixed Income ETF	0.16%
Dimensional Inflation-Protected Securities ETF	0.11%
Dimensional National Municipal Bond ETF	0.17%

## Dividends, Capital Gains Distributions and Taxes

**Dividends and Distributions.** Each Portfolio intends to qualify each year as a regulated investment company under the Internal Revenue Code of 1986, as amended (the "Code"). As a regulated investment company, a Portfolio generally pays no federal income tax on the income and gains it distributes. Dividends from net investment income are distributed monthly by the Portfolios. Any net realized capital gains (after any reductions for available capital loss carryforwards) are distributed annually, typically in December. A Portfolio may distribute such income dividends and capital gains more frequently, if necessary, in order to reduce or eliminate federal excise or income taxes on the Portfolio.

Capital gains distributions may vary considerably from year to year as a result of a Portfolio's normal investment activities and cash flows. During a time of economic volatility, a Portfolio may experience capital losses and unrealized depreciation in value of investments, the effect of which may be to reduce or eliminate capital gains distributions for a period of time. A Portfolio may be required to distribute taxable realized gains from a prior year, even if the Portfolio has a net realized loss for the year of distribution.

Distributions may be reinvested automatically in additional whole shares only if the broker through whom you purchased shares makes such option available.

**Annual Statements.** Each year, you will receive a statement that shows the tax status of distributions you received the previous calendar year. Distributions declared in October, November, or December to shareholders of record in such month, but paid in January, are taxable as if they were paid in December.

**Avoid "Buying A Dividend."** At the time you purchase your Portfolio shares, a Portfolio's NAV may reflect undistributed income or undistributed capital gains. A subsequent distribution to you of such amounts, although constituting a return of your investment, would be taxable. Buying shares in a Portfolio just before it declares an income dividend or capital gains distribution is sometimes known as "buying a dividend." In addition, a Portfolio's NAV may, at any time, reflect net unrealized appreciation, which may result in future taxable distributions to you.

**Tax Considerations.** This discussion of "**Tax Considerations**" should be read in conjunction with the remaining subsections below containing additional information. In general, if you are a taxable investor, Portfolio distributions are taxable to you as ordinary income, capital gains, or some combination of both. This is true whether you reinvest your distributions in additional Portfolio shares or receive them in cash.

For federal income tax purposes, Portfolio distributions of short-term capital gains are taxable to you at ordinary income rates. Portfolio distributions of long-term capital gains are taxable to you at long-term capital gain rates no matter how long you have owned your shares. A portfolio with a high portfolio turnover rate (a measure of how frequently assets within a portfolio are bought and sold) is more likely to generate short-term capital gains

than a portfolio with a low portfolio turnover. A portion of income dividends reported by a Portfolio as qualified dividend income may be eligible for taxation by individual shareholders at long-term capital gain rates provided certain holding period requirements are met.

Compared to other types of investments, derivatives may be less tax efficient. For example, the use of derivatives by a Portfolio may cause the Portfolio to realize higher amounts of ordinary income or short-term capital gain, distributions from which are taxable to individual shareholders at ordinary income tax rates rather than at the more favorable tax rates for long-term capital gains. Changes in government regulation of derivative instruments could affect the character, timing and amount of a Portfolio's taxable income or gains, and may limit or prevent the Portfolio from using certain types of derivative instruments as a part of its investment strategy. A Portfolio's use of derivatives also may be limited by the requirements for taxation of the Portfolio as a regulated investment company.

*Sale of Portfolio Shares.* The sale of shares of a Portfolio is a taxable event and may result in a capital gain or loss to you. Currently, any capital gain or loss realized upon a sale of Portfolio shares generally is treated as long-term capital gain or loss if the shares have been held for more than one year and as short-term capital gain or loss if the shares have been held for one year or less. Any loss incurred on the sale or exchange of a Portfolio's shares, held for six months or less, will be treated as a long-term capital loss to the extent of capital gain dividends received with respect to such shares. The ability to deduct capital losses may be limited.

*Creation Units.* An authorized participant who exchanges securities for Creation Units generally will recognize a gain or a loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of purchase (plus any cash received by the authorized participant as part of the issue) and the authorized participant's aggregate basis in the securities surrendered (plus any cash paid by the authorized participant as part of the issue). An authorized participant who exchanges Creation Units for securities generally will recognize a gain or loss equal to the difference between the authorized participant's basis in the Creation Units (plus any cash paid by the authorized participant as part of the redemption) and the aggregate market value of the securities received (plus any cash received by the authorized participant as part of the redemption). The Internal Revenue Service, however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales," or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax advisor with respect to whether the wash sale rules apply and when a loss might be deductible.

Under current federal tax laws, any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if the shares have been held for more than one year and as a short-term capital gain or loss if the shares have been held for one year or less, assuming such Creation Unit is held as a capital asset.

If a Portfolio redeems Creation Units in cash, it may recognize more capital gains than it will if it redeems Creation Units in-kind.

*Medicare Tax.* An additional 3.8% Medicare tax is imposed on certain net investment income (including ordinary dividends and capital gain distributions received from a Portfolio and net gains from taxable dispositions of Portfolio shares) of U.S. individuals, estates and trusts to the extent that such person's "modified adjusted gross income" (in the case of an individual) or "adjusted gross income" (in the case of an estate or trust) exceeds a threshold amount. Net investment income does not include exempt-interest dividends. This Medicare tax, if applicable, is reported by you on, and paid with, your federal income tax return.

*Backup Withholding.* By law, a 24% withholding tax may apply to taxable dividends, capital gains distributions, and redemption proceeds paid to you if you do not provide your proper taxpayer identification number and certain required certifications. You may avoid this withholding requirement by providing and certifying on the account registration form your correct Taxpayer Identification Number and by certifying that you are not subject to backup withholding and are a U.S. person (including a U.S. resident alien). Withholding is also imposed if the Internal Revenue Service requires it.

*State and Local Taxes.* In addition to federal taxes, you may be subject to state and local taxes on distributions from a Portfolio and on gains arising on redemption or exchange of a Portfolio's shares. Distributions of interest

income and capital gains realized from certain types of U.S. Government securities may be exempt from state personal income taxes.

*Non-U.S. Investors.* Non-U.S. investors may be subject to U.S. withholding tax, at either the 30% statutory rate or a lower rate if you are a resident of a country that has a tax treaty with the U.S., and are subject to special U.S. tax certification requirements to avoid backup withholding and claim any treaty benefits. Exemptions from U.S. withholding tax are provided for certain capital gain dividends paid by a Portfolio from net long-term capital gains, exempt-interest dividends, if any, interest-related dividends paid by a Portfolio from its qualified net interest income from U.S. sources and short-term capital gain dividends, if such amounts are reported by a Portfolio. However, notwithstanding such exemptions from U.S. withholding at the source, any such dividends and distributions of income and capital gains will be subject to backup withholding at a rate of 24% if you fail to properly certify that you are not a U.S. person. Non-U.S. investors also may be subject to U.S. estate tax.

*Other Reporting and Withholding Requirements.* Under the Foreign Account Tax Compliance Act ("FATCA"), a 30% withholding tax is imposed on income dividends made by the Portfolio to certain foreign entities, referred to as foreign financial institutions or non-financial foreign entities, that fail to comply (or be deemed compliant) with extensive reporting and withholding requirements designed to inform the U.S. Department of the Treasury of U.S.-owned foreign investment accounts. After December 31, 2018, FATCA withholding also would have applied to certain capital gain distributions, return of capital distributions and the proceeds arising from the sale of Portfolio shares; however, based on proposed regulations issued by the Internal Revenue Service, which may be relied upon currently, such withholding is no longer required unless final regulations provide otherwise (which is not expected). Information about a Portfolio shareholder may be disclosed to the Internal Revenue Service, non-U.S. taxing authorities or other parties as necessary to comply with FATCA or similar laws. Withholding also may be required if a foreign entity that is a shareholder of a Portfolio fails to provide the appropriate certifications or other documentation concerning its status under FATCA.

### **Special Tax Considerations for the Municipal Bond ETF**

*Exempt-Interest Dividends.* In the case of the Municipal Bond ETF, most portfolio distributions will consist of exempt-interest dividends (dividends paid from interest earned on municipal securities). In general, exempt-interest dividends are exempt from regular federal income tax. Exempt-interest dividends from interest earned on municipal securities of a state, or its political subdivisions, generally are exempt from that state's personal income tax. Most states, however, do not grant tax-free treatment to interest from municipal securities of other states.

Because of these tax exemptions, the Municipal Bond ETF may not be suitable investments for retirement plans and other tax-exempt investors. Corporate shareholders should note that these dividends may be fully taxable in states that impose corporate franchise taxes, corporate income taxes, or both, and they should consult with their tax advisors about the taxability of this income before investing in the Municipal Bond ETF. In addition, many states require that the portion of the Portfolio's income that is exempt from taxation be specifically designated.

Exempt-interest dividends are taken into account when determining the taxable portion of your social security or railroad retirement benefits. In addition, the Municipal Bond ETF does not currently intend to invest its assets in municipal securities whose interest is subject to the federal alternative minimum tax.

While the Municipal Bond ETF endeavors to purchase only bona fide tax-exempt securities, there are risks that: (a) a security issued as tax-exempt may be reclassified by the Internal Revenue Service or a state tax authority as taxable and/or (b) future legislative, administrative or court actions could adversely impact the qualification of income from a tax-exempt security as tax-free. Such reclassifications or actions could cause interest from a security to become taxable, possibly retroactively, subjecting you to increased tax liability. In addition, such reclassifications or actions could cause the value of a security, and therefore, the value of the Municipal Bond ETF's shares, to decline.

*Taxable Income Dividends.* Although the Municipal Bond ETF attempts to invest all of its assets in tax-exempt securities, it is possible, although not anticipated, that a portion of its assets may be invested in securities that pay taxable interest. These investments could generate taxable income for shareholders. The Municipal Bond ETF may also distribute any market discount and net short-term capital gains from the sale of its portfolio

securities. If you are a taxable investor, Portfolio distributions from this income are taxable to you as ordinary income, and generally will not be treated as qualified dividend income subject to reduced rates of taxation for individuals. Distributions of ordinary income are taxable whether you reinvest your distributions in additional Portfolio shares or receive them in cash.

*Capital Gain Distributions.* The Municipal Bond ETF also may realize net long-term capital gains from the sale of portfolio securities. Portfolio distributions of long-term capital gains are taxable to you as long-term capital gains no matter how long you have owned your shares.

**This discussion of “DIVIDENDS, CAPITAL GAINS DISTRIBUTIONS AND TAXES” is not intended or written to be used as tax advice. Because everyone’s tax situation is unique, you should consult your tax professional about federal, state, local or foreign tax consequences before making an investment in a Portfolio. Prospective investors should also consult the SAI.**

## Purchase and Sale of Shares

Shares of a Portfolio may be acquired or redeemed directly from the Portfolio only in Creation Units or multiples thereof, as discussed in the “**Creations and Redemptions**” section of this Prospectus. Only an Authorized Participant (defined below) may engage in creation or redemption transactions directly with a Portfolio. An “Authorized Participant” is either a “participating party” (i.e., a broker-dealer or other participant in the clearing process through the Continuous Net Settlement System of the National Securities Clearing Corporation) or a Depository Trust Company participant who, in either case, has executed an agreement with the distributor and transfer agent with respect to creations and redemptions of Creation Units. Once created, shares of a Portfolio generally trade in the secondary market in amounts less than a Creation Unit.

Shares of a Portfolio are listed for trading on a national securities exchange during the trading day. Shares can be bought and sold throughout the trading day like shares of other publicly traded companies. However, there can be no guarantee that an active trading market will develop or be maintained, or that a Portfolio’s shares listing will continue or remain unchanged. The Trust does not impose any minimum investment for shares of a Portfolio purchased on an exchange. Shares of the Portfolios trade under the following symbols:

Portfolio	Ticker:
Dimensional Core Fixed Income ETF	<b>DFCF</b>
Dimensional Short-Duration Fixed Income ETF	<b>DFSD</b>
Dimensional Inflation-Protected Securities ETF	<b>DFIP</b>
Dimensional National Municipal Bond ETF	<b>DFNM</b>

Buying or selling a Portfolio’s shares on an exchange involves certain costs that may apply to all securities transactions. When buying or selling shares of a Portfolio through a financial intermediary, you may incur a brokerage commission or other charges determined by your financial intermediary. Due to these brokerage costs, if any, frequent trading may detract significantly from investment returns. The commission is frequently a fixed amount and may be a significant proportional cost for investors seeking to buy or sell small amounts of shares. In addition, you may also incur the cost of the “spread” (the difference between the bid price and the ask price). The spread varies over time for shares of a Portfolio based on its trading volume and market liquidity and is generally less if the Portfolio has more trading volume and market liquidity and more if the Portfolio has less trading volume and market liquidity. Because shares of the Portfolios trade at market price rather than NAV, an investor may pay more than NAV when purchasing shares and receive less than NAV when selling Portfolio shares. Authorized Participants may acquire Portfolio shares directly from a Portfolio, and Authorized Participants may tender their shares for redemption directly to a Portfolio, at NAV per share only in Creation Units, and in accordance with the procedures described in the SAI.

Each Portfolio’s primary listing exchange is NYSE Arca, Inc. The Exchange is open for trading Monday through Friday and is closed on the following holidays: New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day,

Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day.

The Board has not adopted a policy of monitoring for frequent purchases and redemptions of Portfolio shares ("frequent trading") that appear to attempt to take advantage of potential arbitrage opportunities presented by a lag between a change in the value of a Portfolio's portfolio securities after the close of the primary markets for the Portfolio's portfolio securities and the reflection of that change in the Portfolio's NAV ("market timing") because each Portfolio sells and redeems its shares directly through transactions that are in-kind and/or for cash, subject to the conditions described below under "**Creations and Redemptions.**" The Board has not adopted a policy of monitoring for other frequent trading activity because shares of the Portfolios are listed for trading on a national securities exchange.

#### **SHARE PRICE**

The trading prices of a Portfolio's shares in the secondary market will fluctuate continuously throughout trading hours based on the supply of and demand for Portfolio shares and shares of underlying securities held by a Portfolio, economic conditions and other factors, rather than a Portfolio's NAV, which is calculated at the end of each business day. Portfolio shares will trade on NYSE Arca, Inc. at prices that may be above (i.e., at a premium) or below (i.e., at a discount), to varying degrees, the daily NAV of a Portfolio's shares. The trading prices of a Portfolio's shares may deviate significantly from the Portfolio's NAV during periods of market volatility. Given, however, that a Portfolio's shares can be issued and redeemed daily in Creation Units, the Advisor believes that large discounts and premiums to NAV should not be sustained over long periods.

NYSE Arca, Inc. will disseminate, every fifteen seconds during the regular trading day, an indicative optimized portfolio value ("IOPV") relating to a Portfolio. The IOPV calculations are estimates of the value of a Portfolio's NAV per share. Premiums and discounts between the IOPV and the market price may occur. This should not be viewed as a "real-time" update of the NAV per share. The IOPV is based on the current market value of the published basket of portfolio securities and/or cash required to be deposited in exchange for a Creation Unit and does not necessarily reflect the precise composition of a Portfolio's actual portfolio at a particular point in time. Moreover, the IOPV is generally determined by using current market quotations and/or price quotations obtained from broker-dealers and other market intermediaries and valuations based on current market rates. The IOPV may not be calculated in the same manner as the NAV, which (i) is computed only once a day, (ii) unlike the calculation of the IOPV, takes into account Portfolio expenses, and (iii) may be subject, in accordance with the requirements of the 1940 Act, to fair valuation at different prices than those used in the calculations of the IOPV. The IOPV price is based on quotes and closing prices from the securities' local market converted into U.S. dollars at the current currency rates and may not reflect events that occur subsequent to the local market's close. Therefore, the IOPV may not reflect the best possible valuation of a Portfolio's current portfolio. Neither the Portfolio nor the Advisor or any of their affiliates are involved in, or responsible for, the calculation or dissemination of such IOPVs and make no warranty as to their accuracy. In the future, the dissemination of the IOPV may be discontinued.

#### **BOOK ENTRY**

Shares of the Portfolios are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of, and holds legal title to, all outstanding shares of the Portfolios.

Investors owning shares of the Portfolios are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for shares of the Portfolios. DTC participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of shares, you are not entitled to receive physical delivery of stock certificates or to have shares registered in your name, and you are not considered a registered owner of shares. Therefore, to exercise any right as an owner of shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book-entry or "street name" form.

## NET ASSET VALUE

The NAV per share of each Portfolio is normally calculated once daily after the close of the NYSE (normally, 4:00 p.m. ET) by dividing the total value of the Portfolio's investments and other assets, less any liabilities, by the total outstanding shares of beneficial interest of the Portfolio. *Note:* The time at which transactions and shares are priced may be changed in case of an emergency or if the NYSE closes at a time other than 4:00 p.m. ET or in other situations to the extent permitted by the SEC.

The value of shares of each Portfolio will fluctuate in relation to its investment experience. Securities held by the Portfolios will be valued in accordance with applicable laws and procedures approved by the Board, and generally, as described below.

Debt securities will be valued on the basis of prices provided by one or more pricing services or other reasonably reliable sources including broker/dealers that typically handle the purchase and sale of such securities using data reflecting the earlier closing of the principal markets for those securities. Securities which are traded over-the-counter and on a stock exchange generally will be valued according to the broadest and most representative market, and it is expected that for bonds and other fixed income securities, this ordinarily will be the over-the-counter market. Net asset value includes interest on fixed income securities which is accrued daily. Generally, securities issued by open-end investment companies are valued using their respective net asset values or public offering prices, as appropriate, for purchase orders placed at the close of the NYSE.

The value of the securities and other assets of a Portfolio for which no market quotations are readily available (including restricted securities), or for which market quotations have become unreliable, are determined in good faith at fair value in accordance with Rule 2a-5 under the 1940 Act pursuant to procedures approved by the Board of the Trust. Fair value pricing also may be used if events that have a significant effect on the value of an investment (as determined in the discretion of the Advisor) occur before the net asset value is calculated. When fair value pricing is used, the prices of securities used by a Portfolio may differ from the quoted or published prices for the same securities on their primary markets or exchanges.

Valuing securities at fair value involves greater reliance on judgment than valuing securities that have readily available market quotations. There can be no assurance that a Portfolio could obtain the fair value assigned to a security if it were to sell the security at approximately the time at which the Portfolio determines its net asset value per share. As a result, the sale or redemption by a Portfolio of its shares at net asset value, at a time when a holding or holdings are valued at fair value, may have the effect of diluting or increasing the economic interest of existing shareholders.

The net asset values per share of the Core Fixed Income ETF and Short-Duration Fixed Income ETF are expressed in U.S. dollars by translating the net assets of each Portfolio using the mean of the most recent bid and asked prices for the dollar as quoted by generally recognized reliable sources. Since these Portfolios own securities that are primarily traded in foreign markets which may trade on days when the Portfolio does not price its shares, the net asset values of these Portfolios may change on days when shareholders will not be able to purchase or redeem shares.

Futures contracts are valued using the settlement price established each day on the exchange on which they are traded. The value of such futures contracts held by the Portfolio is determined each day as of such close. In the absence of prices that are readily available as defined in Rule 2a-5, the futures contract will be valued in good faith at fair value in accordance with procedures approved by the Board.

Swap agreements will be valued at the price provided by an independent third-party pricing service or source. If a price is not readily available as defined in Rule 2a-5, the swap agreement will be valued in good faith at fair value in accordance with procedures approved by the Board.

Each Portfolio generally calculates its NAV per share and accepts purchase and redemption orders of Creation Units on days that the NYSE is open for trading.

## Creations and Redemptions

Prior to trading in the secondary market, shares of a Portfolio are “created” at NAV by market makers, large investors and institutions only in block-size Creation Units of 50,000 shares (with respect to the Core Fixed Income, Short-Duration Fixed Income and Municipal Bond ETFs) or multiples thereof and 25,000 shares (with respect to the Inflation-Protected ETF) or multiples thereof. All orders to purchase Creation Units must be placed by or through an “Authorized Participant” that has entered into an authorized participant agreement (an “AP Agreement”) with the Portfolios’ distributor (the “Distributor”).

A creation transaction, which is subject to acceptance by the Distributor or its agents, generally takes place when an Authorized Participant deposits into a Portfolio a designated portfolio of securities and a specified amount of cash in exchange for a specified number of Creation Units. Similarly, shares can be redeemed only in Creation Units, generally for a designated portfolio of securities held by a Portfolio and a specified amount of cash. Except when aggregated in Creation Units, shares are not redeemable by a Portfolio. Creation Units are generally issued (or redeemed) by the Municipal Bond ETF in exchange for cash or in-kind for securities and a specified amount of cash. For each Portfolio, the Trust reserves the right to permit or require that creations and redemptions of Shares be effected entirely in cash, in-kind or a combination thereof. Creation Unit transactions conducted in exchange for cash only may cause a Portfolio to recognize capital gains and to pay out higher annual capital gain distributions to shareholders than if such transactions had been conducted in-kind. Conducting Creation Unit transactions in cash may also cause a Portfolio’s shares to trade in the secondary market at wider bid-ask spreads or greater premiums or discounts to the Portfolio’s NAV.

The prices at which creations and redemptions occur are based on the next calculation of NAV after a creation or redemption order is received in an acceptable form under the AP Agreement.

Only an Authorized Participant may create or redeem Creation Units directly with a Portfolio. In the event of a system failure or other interruption, including disruptions at market makers or Authorized Participants, orders to purchase or redeem Creation Units either may not be executed according to a Portfolio’s instructions or may not be executed at all, or a Portfolio may not be able to place or change orders.

When a Portfolio engages in in-kind transactions, the Portfolio intends to comply with the U.S. federal securities laws in accepting securities for deposit and satisfying redemptions with redemption securities by, among other means, assuring that any securities accepted for deposit and any securities used to satisfy redemption requests will be sold in transactions that would be exempt from registration under the Securities Act of 1933, as amended (the “1933 Act”). Further, an Authorized Participant that is not a “qualified institutional buyer,” as such term is defined under Rule 144A of the 1933 Act, will not be able to receive restricted securities eligible for resale under Rule 144A.

Creations and redemptions must be made through a firm that is either a member of the Continuous Net Settlement System of the National Securities Clearing Corporation or a DTC participant and, in either case, has executed an AP Agreement with the Distributor. Information about the procedures regarding creation and redemption of Creation Units (including the cut-off times for receipt of creation and redemption orders) is included in the Portfolios’ SAI.

Because new shares may be created and issued on an ongoing basis, at any point during the life of a Portfolio a “distribution,” as such term is used in the 1933 Act, may be occurring. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner that could render them statutory underwriters subject to the prospectus delivery and liability provisions of the 1933 Act. Any determination of whether one is an underwriter must take into account all the relevant facts and circumstances of each particular case.

Broker-dealers should also note that dealers who are not “underwriters” but are participating in a distribution (as contrasted to ordinary secondary transactions), and thus dealing with shares that are part of an “unsold allotment” within the meaning of Section 4(a)(3)(C) of the 1933 Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the 1933 Act. For delivery of prospectuses to

exchange members, the prospectus delivery mechanism of Rule 153 under the 1933 Act is available only with respect to transactions on a national securities exchange.

## Premium/Discount Information

Information showing the number of days the market price of a Portfolio's shares was greater than the Portfolio's NAV and the number of days it was less than the Portfolio's NAV (i.e., premium or discount) for various time periods is available by visiting the Portfolio's website at <https://us.dimensional.com/etfs>.

## Disclosure of Portfolio Holdings

A description of the Trust's policies and procedures regarding the release of portfolio holdings information is also available in the Trust's SAI. Portfolio holdings information is available by visiting a Portfolio's website at <https://us.dimensional.com/etfs>.

## Delivery of Shareholder Documents

To eliminate duplicate mailings and reduce expenses, certain broker-dealers may deliver a single copy of certain shareholder documents, such as this Prospectus and annual and semi-annual reports, to related shareholders at the same address, even if accounts are registered in different names. This practice is known as "householding." You may contact your broker-dealer to enroll in householding. Once enrolled, this process will continue indefinitely unless you instruct your broker-dealer otherwise. If you do not want the mailings of these documents to be combined with those of other members of your household, please contact your broker-dealer. At any time you may view current prospectuses and financial reports on a Portfolio's website at <https://us.dimensional.com/etfs>.

## Distribution

The Distributor or its agents distribute Creation Units for the Portfolios on an agency basis. The Distributor does not maintain a secondary market in shares of the Portfolios.

### **DISTRIBUTION AND SERVICE (12B-1) FEES**

The Board has adopted a distribution plan, sometimes known as a Rule 12b-1 plan, that allows a Portfolio to pay distribution fees of up to 0.25% per year, to those who sell and distribute Portfolio shares and provide other services to shareholders. However, the Board has determined not to authorize payment of a Rule 12b-1 plan fee at this time. Because these fees are paid out of a Portfolio's assets on an ongoing basis, to the extent that a fee is authorized, over time these fees will increase the cost of your investment and may cost you more than paying other types of sales charges.

### **Financial Highlights**

The Financial Highlights table is meant to help you understand each Portfolio's financial performance for the past 5 years or, if shorter, the period of that Portfolio's operations, as indicated by the table. The total returns in the table represent the rate that you would have earned (or lost) on an investment in the Portfolio, assuming reinvestment of all dividends and distributions. This information has been audited by PricewaterhouseCoopers LLP, whose report, along with the Portfolios' financial statements, is included in the annual report. Further information about the Portfolios' performance is contained in the annual report, which is available upon request.

## Financial Highlights

(For a share outstanding throughout each period)

	Dimensional Core Fixed Income ETF
	Period November 15, 2021 through October 31, 2022
Net Asset Value, Beginning of Period	\$ 50.03
<b>Income From Investment Operations<sup>(a)</sup></b>	
Net investment Income (Loss)	1.28
Net Gains (Losses) on Securities (Realized and Unrealized)	(10.06)
Total from Investment Operations	(8.78)
<b>Less Distributions:</b>	
Net investment Income	(0.84)
Total Distributions	(0.84)
Net Asset Value, End of Period	\$ 40.41
Total Return at NAV <sup>(b)(c)</sup>	(17.67)%
Total Return at Market <sup>(c)(d)</sup>	(17.46)%
Net Assets, End of Year (thousands)	\$1,375,916
Ratio of Expenses to Average Net Assets <sup>(e)</sup>	0.19%
Ratio of Expenses to Average Net Assets (Excluding Fees Waived, Expenses Reimbursed, Previously Waived Fees Recovered by Advisor and/or Fees Paid Indirectly <sup>(e)</sup> )	0.20%
Ratio of Net Investment Income to Average Net Assets <sup>(e)</sup>	3.05%
Portfolio Turnover Rate <sup>(c)(f)</sup>	75%

<sup>(a)</sup> Computed using average shares outstanding.

<sup>(b)</sup> Net asset value ("NAV") total return is calculated assuming an initial investment made at the net asset value at the beginning of the period, reinvestment of all dividends and distributions at net asset value during the period, if any, and redemption on the last day of the period at net asset value. This percentage is not an indication of the performance of a shareholder's investment in the Fund based on market value due to differences between the market price of the shares and the net asset value per share of the Fund.

<sup>(c)</sup> Not annualized for periods less than one year.

<sup>(d)</sup> Market value total return is calculated assuming an initial investment made at the market value at the beginning of the period, reinvestment of all dividends and distributions at net asset value during the period, if any, and redemption on the last day of the period at market value. Market value is determined by the composite closing price. Composite closing security price is defined as the last reported sale price from any primary listing market (e.g., NYSE Arca) or participating regional exchanges or markets. The composite closing price is the last reported sale price from any of the eligible sources, regardless of volume and not an average price and may have occurred on a date prior to the close of the reporting period. Market value may be greater or less than net asset value, depending on the Fund's closing price on the listing market.

<sup>(e)</sup> Annualized for periods less than one year.

<sup>(f)</sup> Excludes impact of in-kind transactions.

### **Other Available Information**

You can find more information about the Trust and each Portfolio in the Portfolios' SAI and Annual and Semi-Annual Reports.

### **Statement of Additional Information.**

The SAI, incorporated herein by reference, supplements, and is technically part of, this Prospectus. It includes an expanded discussion of investment practices, risks, and fund operations.

### **Annual and Semi-Annual Reports to Shareholders.**

These reports focus on Portfolio holdings and performance. The Annual Report also discusses the market conditions and investment strategies that significantly affected the Portfolios in their last fiscal year.

### **How to get these and other materials:**

- Your investment advisor or broker-dealer—you are a client of an investment advisor or broker-dealer who has invested in a Portfolio on your behalf.
- The Trust—Call collect at (512) 306-7400.
- Access them on our Web site at <http://us.dimensionalfund.com>.
- Access them on the EDGAR Database on the SEC's Internet site at <http://www.sec.gov>.
- Obtain them, after paying a duplicating fee, by electronic request at the following e-mail address: [publicinfo@sec.gov](mailto:publicinfo@sec.gov).
